Over 65 years of innovations and thousands of realized applications

In 1953, the Waldrich Maschinenfabrik registered a global patent for a steel, unsupported cable carrier to protect moving cables and hoses". The visionary company owner Dr. Oskar Waldrich recognized the invention's potential and established his own subsidiary for the new product in 1954: KABELSCHLEPP. Since this launch, the company has been ensuring the continuous further development of the applications involving this machine component – constantly with new product concepts, innovative materials and extensive customer service.

TSUBAKI KABELSCHLEPP is currently a global player with international representatives and subsidiaries in more than 70 countries and cable carrier systems are a permanent component of almost every machine. Our innovative solutions have proven themselves worldwide in the most diverse industries – and in fact, no longer just in the classical application areas such as machine tools, crane systems, washing lines and medical and laboratory technology, but also in industrial robots, high-sea oil drilling platforms and

space travel. Our experts develop individual products even for complex and unusual fields of usage. In this process, the application defines the material – in addition to steel cable carriers, plastic and hybrid systems are also available. This allows for a wide range of products which can be used for countless applications. There is even an ideal solution for individual challenges – in standard widths or adapted to customer requirements on a millimeter grid. The range of products and accessories comprises over 100,000 variants. These include, for example, strain reliefs, divider systems, channels, hoses, cables, connectors and ready-to-install complete systems.

KABELSCHLEPP and TSUBAKI – together what fits together

TSUBAKI KABELSCHLEPP is integrated into the TSUBAKI Group since 2010 and made responsible for managing the worldwide Cable Carrier Systems business. For more than 50 years, both companies have been close cooperative partners. With this integration, we will leverage our successful working relationship in one strategic enterprise.

This global enterprise offers numerous advantages:

- » An even larger product portfolio to select from
- » Global yet locally supported – vast network of more than 40 international subsidiaries
- » Global manufacturing operations allow for shorter delivery times
- » Combined R&D resources allow for quick and innovative product development

KABELSCHLEPP + TSUBAKI = MORE

MORE Product Solutions

An expanded product portfolio of TSUBAKI products and KABELSCHLEPP cable carrier systems.

MORE Innovations

A combined global R&D with even more resources ensures a quicker response to our customer's needs.

MORE Regional Service

A combined TSUBAKI and KABELSCHLEPP sales force provides added local support. KABELSCHLEPP® products are also now available through the TSUBAKI network of distributors.

MORE Global Support

A unified global sales and support network extends to over 70 countries around the world, providing service and support when and where you need it most.

MORE Value

Together we will continue to prove our reputation as one of the industry's "Best Value" supplier in the industry.

Project and development competence

KABELSCHLEPP has been a synonym for innovation since the company was founded. More than 65 years of experience in flexible and efficient development and manufacturing structures make TSUBAKI KABELSCHLEPP a competent partner for customized special solutions and standard products. The demands on development and manufacturing are increasing steadily.

Products are developed worldwide for specific customer and application requirements and form the foundation for our continuously growing experience and technical compe-

tence. In combination with modern simulation tools, test methods and manufacturing processes, this experience allows us to develop efficient development processes – especially for individual project solutions. In close coordination with our customers and their requirements, we optimize all processes for meeting the technical and production requirements as well as factors such as functionality and design of the product. That saves production times and costs.

Tailored customer solutions

Customized cable carriers not only feature innovative technology, they also offer convincing ergonomics and design aspects. DTO (designed to order) – under a separate type designation, TSUBAKI KABELSCHLEPP develops individual

systems for virtually any area of application. Development always focuses on ergonomics, functionality, economic efficiency and customer benefit.

Concept, design and development, project planning

- » Customized solutions based on customer requirements
- » Know-how from the inventor of cable carriers
- » Decades of experience in the development and design of new systems

Design engineering

- » CAD modeling on state-of-the-art systems
- » Simulations and tests on virtual prototypes based on computer-aided model data
- » Calculation and evaluation

Prototyping

- » In-house 3D printing
- » Vacuum casting
- » Additive manufacturing of new systems

Validation, testing

- » Tests on product-specific test benches according to customer specifications
- » State-of-the-art product simulation processes, FMEA and moldflow analyses

Production, assembly

- » Automated individual/series production and assembly
- » Permanent quality control during production and assembly

Service that you can rely on

Our service team can design and assemble your cable carrier system even for applications with extreme assembly conditions.

- » Complete assembly with guide channels
- » Uncoiling of harnessed cable carrier systems with long travel lengths
- » Assembly at great heights (e. g. crane systems)

The specialists of our service center provide you with the support that you need. You will see: With TSUBAKI KABELSCHLEPP, you make a decision in favour not only of a cable carrier, but of a totally harmonised system.

Certified Quality Management

We are a reliable partner for a number of industries where special attention is paid to durability and quality. Therefore, we have defined strict requirements for the safety, functionality and performance of our products. Both, internal tests and certificates from independent testing institutes prove that our products and processes comply with these quality standards.

Ecology & Economy

We are advancing the development of environmentally friendly products to conserve the environment and reduce the environmental impact of our operations by improving the efficiency of production activities and developing products that effectively lower energy consumption.

These products help customers reduce energy consumption and improve the economic aspects of their operations. Long-Term objective is to significantly reduce CO₂ emissions.

Further information can be found at tsubaki-kabelschlepp.com

The Tsubaki Eco Link logo is used only on products that satisfy the standards for environmental friendliness set by the Tsubaki Group.

Cable carrier

Cable carrier

TSUBAKI KABELSCHLEPP supplies steel, highgrade stainless steel and solid plastic cable carriers and plastic cable carriers with aluminium stays (Hybrid cable carriers), in standard sizes or tailor-made to an individual customer's requirements in millimetre units.

- » Solid plastic cable carriers with fixed chain widths
- » Hybrid cable carriers with variable chain widths
- » Covered solid plastic, and hybrid cable carriers
- » Cable carriers for 3D applications
- » Steel cable carriers
- » Covered steel cable carriers

Cables for cable carriers

TRAXLINE® electrical cables were specially developed, optimized and tested for use in cable carrier systems. Even in the most exacting application conditions, they provide the reliability that matters – and at reasonable prices.

- » Control cables
- » Power cables
- » Data cables
- » BUS-/FOC-/Coaxial cables
- » System cables
- » Power One Heavy Duty High voltage cable

Ready-to-assemble cable carrier system

Under the name TOTALTRAX® TSUBAKI KABELSCHLEPP supplies complete, fully-harnessed cable carrier systems. According to our customers' requirements we can supply harnessed cable carriers with the cables already inserted up to a full complex system.

- » Consulting
- » Planning
- » Design
- » Cable carriers
- » Power- and Control cables
- » Complete guarantee
- » Hydraulic hoses
- » Pneumatic hoses
- » Plug-and-socket connectors
- » Assembly plates
- » Complete assembly of all components
- » Wall modules
- » Windows modules
- » Corner modules
- » Roof modules
- » Sliding doors
- » Folding doors
- » Lift gates
- » Roll gates

Conveyor Systems

For transporting chips / shavings, trimmings, metal scrap, forgings, moulded parts and plastic components KABELSCHLEPP can supply bespoke, client-specific conveyor systems.

- » Conveyor Systems
- » Hinged belt conveyors
- » Scraper conveyors
- » Belt conveyors

Guideway Protection Systems

Fully developed, safe systems that protect guideways, spindles and axles from contamination and damage. Our guideway protection solutions thus avoid expensive down times and facilitate optimal production processes.

- » Telescopic covers
- » Way wipers on guideways
- » Link apron covers
- » Bellows
- » Conical spring covers
- » Roll-up covers

Steelworks and Rolling Mills

At the hotspot of metallurgy

Glowing workpieces, extreme temperatures, enormous loads – our cable carriers really do hard work in metallurgy. They are robust, heat resistant and lubricant free and protect reliably cables and hoses from the most extreme conditions. Our product range covers almost all possible applications along the value chain of metal production and processing. Hundreds of realized projects in steelworks and rolling mills prove that this is one of our core areas of expertise.

Mining & Drilling

Treasure hunters, watch out!

Thousand of tons of soil need to be moved or hundreds of meters deep need to be drilled to get to the precious mineral resources. Heavy machinery excavates and drills towards the underground deposits. Man and machine must perform at their maximum. These are exactly the extreme conditions where our heavy duty cable carriers are doing their best job. They are robust and durable and protect reliably sensitive cables on heavy machinery while they withstand vibrations, dust and dirt.

Work Platforms & Material Handling Vehicles

We lift you up!

A workplace at lofty heights somewhere between heaven and earth – whether for pruning trees, for maintenance or repair under the roof of a production hall or in firefighting. Special vehicles with lifting technology or telescopic booms take workers up to their extraordinary workplaces. On board: our cable carriers. From lifting to telescopic movements, from movable beams to rotary movements – our products follow smoothly all required movements. At the same time they reliably protect signal and control cables, electric cables and hydraulic hoses.

Up and down – again and again. Lifting, stacking, picking – industrial trucks are indispensable in intralogistics. Our products for guiding cables follow each lifting movement. Our cable carriers are robust and durable and are perfectly designed for such permanent use applications. Different types of forklift trucks ensure all horizontal, in-house transport. No matter which type you use – we support you maintaining your flow of goods.

Agriculture

Not only do we make cows happy...!

Sensors automatically determine how much fertilizer needs to go into the soil. Cows decide themselves when they want to be milked by a milking robot. Modern farming is automated - agriculture has become a high-tech industry. However, the rough operating conditions have remained. Wherever sensitive technology needs to be protected, our cable carriers are in demand. Their fields of application are as diverse as the range of agriculture itself - from milking robots to farm machines, from aquacultures to smart farming.

Furniture Industry

There is no second chance for a first impression

Attractive premises, designed by architects - our cable carriers also have to cut a good figure into interiors. As everyone knows, beauty is in the eye of the beholder. In this case our Protum Office has even convinced the jury's critical eyes - and received the IF Design Award. With its special design it perfectly fits into a tastefully designed environment. Being stylish and functional at the same time it safely holds all cable. Thus, it ensures not only tidiness but also an overall appealing appearance - from designed offices to service desks, from operations centers to media boards in educational institutions.

Telescopes

We'll get you the moon and the stars!

As old as mankind - looking up at the stars. So technologically advanced - looking (and listening) into the endless vastness of space. Only possible with specially developed telescopes. They are the result of intensive cooperation between research institutes and specialist companies.

We have many years of experience in this extremely demanding field between science and technology. Our cable carriers do a fantastic job in many different research institutes across the globe. Whether locking systems for giant domes or precisely aligning parabolic mirrors and optical telescopes through rotating and swiveling - our cable carriers smoothly move these applications containing such highly sensitive technology.

Medical Technology

A clean affair!

Our solutions for clean rooms, especially for medical applications, are a clean affair. Using state-of-the-art technology has become essential in modern medicine - in diagnostics, therapy and care. Meeting highest hygienic standards is top priority.

We offer solutions for a wide range of equipment for imaging diagnostics, for analysis and laboratory equipment, as well as surgery and treatment tables and chairs. Precise alignment, exact positioning or comfortable storage of patients - only possible through multiple, electrical adjustments. Our cable carriers make all this possible: functional, low-vibration, reliable, IP54* certified - and, if desired, with an extra touch of design.

* Refers to type series TKA55 with Bi 50 - 175.

More information on certification: tsubaki-kabelschlepp.com/tka-ip54

Cleanroom

Cleanliness in its pure form

Maximum purity and hygiene! Consistent separation of polluted and clean environment. These are the demanding requirements for producing food and medicinal products. From pharmaceutical industry through medical technology to high-tech industry - all of them require an especially low-particle environment and "technical cleanliness" for their production processes. It comes as no surprise that clean rooms, processes and products are a must! Because any contamination leads to costly incidents, scrap or useless laboratory results.

Our special cleanroom solutions are particularly designed for such hygiene-sensitive production areas. They are abrasion-resistant and low-vibration and thus, keep the number of airborne particles at technically possible minimum. Certified as "cleanroom-suitable", our cable carriers meet all standards of the various cleanroom classes up to cleanroom class 1.

The suitable cable carrier for your application

1.1 Solid plastic, hybrid and steel cable carriers

Our product portfolio offers one of the largest modular systems for cable carrier systems within the industry with regard to material and type variants. Depending on the series and cable carrier type, the cable carriers have different designs.

Solid plastic cable carriers

TSUBAKI KABELSCHLEPP offers a great variety of different solid plastic cable carriers with predefined widths. All cable carriers combine robustness and reliability with an attractive price-performance ratio. Fast and easy installation of cables and hoses is another advantage of these cable carriers.

Hybrid cable carriers

Hybrid cable carriers from KABELSCHLEPP® offer a high level of variability for cable carrier widths and separation options within the cable carrier. This allows reliable and efficient partitioning even for complex cable configurations. Hoses and cables with larger diameters can also be accommodated and guided.

Steel cable carriers

Special applications require the use of special cable carriers. Our steel and stainless steel cable carriers are ideal for extreme heat or other extremely rough ambient conditions, such as in mining, in the steel industry or in the oil industry. Standardized separating options offer best possible protection for cables and hoses even under strong mechanical strain.

Cable carriers consisting of side bands

Band carriers consist of two parallel side bands which are connected with different stay and cover variants. These cable carrier types made of plastic, aluminum or steel offer more variability compared to one-part versions, even for large widths – depending on the stay variant even in a 1 mm grid and more separation options within the cable space.

This allows reliable and efficient partitioning even for complex cable configurations, including with individual hole stays. Hoses and cables with large diameters can also be accommodated and guided without problems. Closed systems provide even better protection.

One-part cable carriers

On one-part cable-carriers, the body section consists of a single component. Crossbars, lamella or covers are mounted on the cable carrier body separately or manufactured directly together with the chain link.

Our basic range comprises a variety of different product types with predefined cable carrier widths. All cable carriers combine robustness and reliability with an attractive price-performance ratio. Fast and easy installation of cables and hoses is another advantage of these cable carriers. Covered and completely enclosed product types ensure optimum protection of the cables and hoses against chips and other coarse contamination.

BASIC-LINE**Solid plastic cable carriers with fixed widths**

- » Cost-effective solutions for standard applications
- » Types and designs with fixed or opening crossbars
- » Numerous types and designs available from stock immediately
- » Fast cable laying
- » Ideal for short travel lengths and high travel speeds
- » Types for long travel lengths available

BASIC-LINE^{PLUS}**Solid plastic cable carriers with fixed widths**

- » Cost-effective solutions for standard applications
- » Easy pulling/pressing of the cables into the cable carrier
- » Very fast cable laying
- » Numerous types and designs available from stock immediately
- » Ideal for short travel lengths and high travel speeds

3D-LINE**Cable carriers for 3D applications**

- » Ideal for maximum freedom of movement in 3D applications
- » Three-dimensional swivel and rotation movements, for example on robots for use from robot base to robot wrist
- » Extend the service life of cables in 3D applications through defined minimum bending radius and separation and guiding of the cables
- » For extremely high tensile forces and accelerations

STEEL-LINE**Steel cable carriers for extreme applications**

- » Robust design for high mechanical loads
- » High additional loads and extensive unsupported lengths possible
- » Ideal for extreme and rough environmental conditions
- » Heat-resistant

VARIO-LINE

Cable carriers with variable chain widths

- » Aluminum stays available in 1 mm width sections
- » Plastic stays available in 4, 8 or 16 mm width sections (depending on type)
- » Easy and quick to open inside and outside
- » Light, extremely robust or linkless series
- » Cable carriers for complex applications

TUBES-PLASTIC

Covered solid plastic and hybrid cable carriers

- » Covered cable carriers with plastic or aluminum cover systems
- » Aluminum cover systems in 1 mm width sections
- » To protect cables and hoses against chips or dirt
- » Easy and quick to open inside and outside

TUBES-STEEL

Covered steel cable carriers for extreme applications

- » Robust design for high mechanical loads
- » High additional loads and extensive unsupported lengths possible
- » Ideal for extreme and rough environmental conditions
- » Heat-resistant

ACCESSORIES

for cable carriers

Our extensive range of accessories for a variety of different applications turn cable carriers into complete cable carrier systems. In addition to chutes and channels, support elements and guiding elements, we offer application-specific products such as driver connections or opening tools.

1.2 Pitch and inner height as characteristic parameters for cable carriers

Pitch and inner height are essential components of application-specific solutions. Depending on the installation space of your application, these have to be configured individually. The chapter "Cable carriers" from page 14 offers an overview of the configuration options, depending on the cable carrier type.

1.3 Explanation of KR and RKR as well as KR/RKR

A cable carrier can be deflected at a defined bending radius (KR). A reverse bending radius (RKR) is the formation of a radius (preferably on the driver of a cable carrier) in the opposite direction to the actual KR of the remaining cable carrier. This variant is used, for example, for reducing the cable carrier overhand in the thrust end position (station length).

This version is used for gliding cable carriers with long travel lengths, among other applications. Depending on the cable carrier type, we offer standardized models with so-called GO modules. The cable carrier can also be deflected in both swivel directions (KR/RKR), e.g. for circular arrangements.

TSUBAKI KABELSCHLEPP technical support

If you have any questions about the configuration of cable carriers or technical details, please contact our technical support service at technik@kabelschlepp.de. We will be happy to help you.

02 Stay variants

2.1 Overview

The stay variants available for each cable carrier series can be found in the overview of the associated catalog chapter or in the "Cable carriers" chapter from page 14.

Aluminum stay RS | Hybrid cable carriers

Narrow frame stay "The standard"

- » Extremely quick to open and close
- » Aluminum profile bars for light to medium loads.
Assembly without screws.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** release by turning by 90°.

Aluminum stay RS 1 | Steel cable carriers

Narrow frame stay "The standard"

- » Extremely quick to open and close
- » Aluminum profile bars for light to medium loads.
Assembly with screws.
- » Available customized in **1 mm grid**.
- » **Outside:** release by turning by 90°.
- » **Inside:** threaded joint easy to release.

Aluminum stay RS 2 | Steel cable carriers

Frame stay narrow, bolted

- » Quick to open and close.
- » Aluminum profile bars for light to medium loads.
Assembly with screws.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Aluminum stay RV | Hybrid cable carriers

Frame stay, reinforced

- » Aluminum profile bars with plastic adapter for medium to high loads and large cable carrier widths. Assembly without screws.
- » Available customized in **1 mm grid**.
- » **Outside/inside:** release by turning by 90°.

Aluminum stay RV | Steel cable carriers

Frame stay, reinforced

- » Aluminum profile bars with plastic adapter for medium to high loads and large cable carrier widths. Double threaded joint on both sides.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** Threaded joint easy to release.

Aluminum stay RM

Frame stay, solid

- » Aluminum profile bars for heavy loads and maximum cable carrier widths. Double threaded joint on both sides "**Heavy Duty**".
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Aluminum stay LG

Hole stay, split version

- » Optimum cable routing in the neutral bending line. Split version for easy cable routing. Stays also available unsplit (aluminum stay LU).
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Aluminum stay RMF

Frame stay, solid with optional fixing bar

- » Aluminum profile bars for heavy loads and large cable carrier widths. Simple threaded joint.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Aluminum stay RMS

Frame stay solid with ball joint

- » Aluminum profile bars with plastic ball joint. Assembly without screws.
- » Opening and detachable on both sides in any position.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** Opening and detachable.

Aluminum stay RMA

Mounting frame stay

- » Aluminum profile bars with plastic mounting frame stays for guiding very large cable diameters.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Aluminum stay RMR

Frame rolling stay

- » Aluminum profile bars with rotating plastic rolling stay for highest requirements with gentle cable guiding. Double threaded joint on both sides.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Steel stay RR

Frame stay, tube version

- » Steel rolling stays with gentle cable support and plastic dividers. With plastic or steel dividers, depending on cable carrier type. Ideal for using media hoses with soft jackets. Simple threaded joint.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** Threaded joint detachable.

Aluminum stay RSH

Frame screw-in stay

- » Aluminum profile bars for light and medium loads. Assembly without screws.
- » Available customized in **1 mm grid**.
- » **Outside/inside:** release by turning.

Aluminum cover RMD | Hybrid cable carriers

Cover with hinge in the outer radius "standard"

- » Aluminum cover system with hinge for light and medium loads. Assembly without screws.
- » Available customized in **1 mm grid**.
- » **Outside:** swivable to both sides.
- » **Inside:** release by turning by 90°.

Aluminum cover RMD | Steel cable carriers

Aluminum cover system

- » Bolted aluminum covers for maximum stability.
- » For applications generating chips or coarse contamination.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** threaded joint easy to release.

Plastic stay RE

Frame screw-in stay

- » Plastic profile bars for light and medium loads. Assembly without screws.
- » Available customized in **4, 8 or 16 mm grid** depending on type.
- » **Outside/inside:** release by turning by 90°.

Plastic stay RE

Frame screw-in stay

- » Plastic profile bars for light and medium loads. Assembly without screws.
- » Available in fixed widths depending on type.
- » **Outside/inside:** release by turning by 90°.

Plastic stay RD

Frame stay with hinge

- » Plastic profile bars with hinge for light and medium loads. Assembly without screws.
- » Available customized in **8 or 16 mm grid** depending on type.
- » **Outside:** swivable to both sides.
- » **Inside:** release by turning by 90°.

Plastic cover RD

Cover with hinge in the outer radius "standard"

- » Plastic cover system with hinge for light and medium loads. Assembly without screws.
- » Available customized in **8 or 16 mm grid** depending on type.
- » **Outside:** swivable to both sides.
- » **Inside:** release by turning by 90°.

2.2 Opening options

The stays in the cable carriers can be opened in different ways, depending on the stay variant. Detailed information can be found in the overview of the stay variants from page 49 and in the respective catalog chapters for the cable carrier types.

Overview of opening principles

2.3 Explanation of fully stayed and half-stayed

Depending on the version, a different number of stays can be mounted on the number of chain links in our cable carriers. Essentially, there are two versions:

Half-stayed (HS)

Most cable carriers are supplied half-stayed as a standard (stay of every 2nd link). This excludes closed cable carriers where no half-stayed version is available and versions where chain link and stay form a unit.

The half-stayed cable carrier versions still offer a very high level of stability thanks to a sturdy connection between the stays and the link plates. In addition to the cost advantage due to fewer components, this also results in reduced assembly time.

Fully-stayed (VS)

As the dividers are also mounted on every 2nd chain link as a standard, the same structure for the inner distribution as in a fully-stayed cable carrier can be used on a half-stayed version. After examination of the application at hand, we may recommend using fully-stayed cable carriers when installing very thin cables or when using very narrow cable carriers to improve side stability.

03 Divider systems

3.1 Overview

Divider and height separation serve to separate cables in the cable carrier cross section. These can be arranged evenly next to each other, on top of each other and offset.

As a standard, the divider system is mounted at every 2nd chain link.

3.2 Explanation of the systems

Divider system TS0

without height separation

Dividers for vertical separation [1] can be installed between all types of stay variants. They efficiently separate the cables to prevent friction between different jacket materials. This provides best possible protection for cables and insulation.

Divider system TS1

with continuous height separation

In addition to the vertical separation with dividers [1], the inner height is divided into several levels with a horizontal height separation [2] across the entire inner width, systematically layer by layer. This creates order and a clear structure for multiple cables with a similar cross section.

Divider system TS2

with partial height separation

This divider system allows all combinations of vertical separation with dividers [1] and partial horizontal height separation [2] made of aluminum in a 1 mm grid.

Divider system TS3

with height separation made of plastic partitions

This divider system allows all combinations of vertical separation with dividers [1] and partial horizontal partitions made of plastic [2] or optionally of aluminum [3] in a 3 mm grid. These can also be retrofitted or changed by rearranging.

The twin divider [4] additionally provides the option of subsequent vertical separation.

Modern TS3 divider systems reduce the packaging space required for this to a minimum, providing more cable space.

Width comparison

Previous divider system TS3 with stay variant RSH/RE

Significant space saving with same filling capacity through the new divider system TS3 with stay variant RSH/RE

Width optimization through adapted dividers

* For inner width $B_3 = 238$ mm with stay variant RE

Cable routing with hole stays

Stay variant LG

Individually manufactured hole stays allow the inner distribution to be ideally adapted to your cables. The hole stays can be guided in the neutral bending line. Cable carriers with aluminum stays can therefore be ordered customized to the millimeter.

The hole stay system is also very easy to assemble because the cable openings are freely accessible by removing the top part.

04 Connection variants

4.1 Explanation of UMB, plastic end connectors and steel end connectors

Depending on the cable carrier type and specific application, we offer different end connectors for fastening your cable carrier to your plant sections.

- » **Driver connection:** Fastening to moving machine or plant parts.
- » **Fixed point connection:** Fastening to static machine or plant parts or the floor.

Universal end connectors (UMB), plastic

The universal end connectors (UMB) can be connected from the top, from below at the face side or – depending on the type – at the side. An accommodation for strain relief with C-rails and LineFix clamps or strain relief combs is integrated. Universal end connectors are made of solid plastic without metal bushes.

One-part end connectors, plastic

One-part end connectors made of solid plastic can be arranged on the cable carrier in different variants depending on the customer fastening. They are optionally available with integrated strain relief.

Multi-part end connectors, plastic/steel

Link section made of solid plastic, steel end connector. The multi-part end connectors can be connected from the top, from underneath or at the face side, depending on the type. Depending on the cable carrier type, strain reliefs with separate C-rail or strain relief comb can be integrated.

Multi-part end connectors, steel

End connectors made of steel. The multi-part end connectors can be connected from the top or from underneath, depending on the type. Depending on the cable carrier type, strain reliefs with separate C-rail can be integrated.

4.2 Connection variants

Connection point

- F - fixed point
- M - driver

Connection type

- A - threaded joint outside (standard)
- I - threaded joint inside
- H - threaded joint, rotated 90° to the outside
- K - threaded joint, rotated 90° to the inside
- F - flange connection

Connection surface

- I - connection surface inside
- A - connection surface outside

As a standard, the end connectors are installed with the threaded joint (connection type) to the outside and the connection surface to the inside (FAI/MAI).

5.1 Overview and explanation of strain relief options

The strain relief for the cables depends on cable type, length of the cable carrier and installation position. Depending on the cable carrier type and specific application, we offer different strain relief options.

LineFix® clamps

These clamps can be positioned next to each other with a C-rail. The C-rail is integrated into the end connector or has to be fastened separately in front of it.

Detailed information can be found in chapter Accessories from page 906..

Strain relief combs

Strain relief combs can be used to connect the cables to the existing teeth with cable ties. The strain relief combs are integrated into the end connector or have to be fastened separately in front of it.

Detailed information can be found in chapter Accessories from page 910.

SZL strain reliefs

The SZL strain reliefs hold the cables with half shells and fix them in position with detachable clamps. The C-rail is integrated into the end connector or has to be fastened separately in front of it.

Detailed information can be found in chapter Accessories from page 912.

Block clamps

Block clamps are usually used for hoses and hold these with two half shells bolted together, which can be attached to a C-rail. The C-rail is integrated into the end connector or has to be fastened separately in front of it.

Detailed information can be found in chapter Accessories from page 913..

More on the use of strain reliefs and assembly information can be found in the configuration guidelines from page 62.

06 Gliding elements

6.1 Use of glide shoes

We offer different solutions for a substantially extended service life of the cable carrier in case of long travel lengths in gliding operation.

Replaceable glide shoes made of plastic

The replaceable glide shoes are a very cost-efficient solution as only the glide shoes and not the complete cable carrier have to be replaced when worn. An abrasion resistant material is used for travel speeds > 2.5 m/s and high additional loads.

OFFROAD glide shoes with 80 % greater wearing volume is also available for the types M0650-M1300. We recommend their use for extreme ambient conditions (for especially abrasive substances such as sand, dust, corundum).

Slide discs

If the cable carrier is positioned so it is rotated by 90° (gliding on the outside of the side band), slide discs snapped onto the side optimize the friction and wear situation.

Molded slide runners

These ensure a long service life of the cable carrier for long travel lengths and high additional loads.

07 Multi-band cable carriers

7.1 Area of application for multi-band cable carriers

High additional loads and longest possible service lives are a challenging combination for the design engineering of cable carriers. Many applications are subject to extreme ambient conditions, requiring special solutions. If the max. permitted width or load for the cable carrier are exceeded, multi-band cable carriers are used where additional side bands are installed between the two outer side bands.

Cable carriers in multi-band design made from plastic or steel can manage significantly higher loads compared to the conventional version. The use of aluminum frame stays allows implementation of precision-fit cable carrier widths with high stability. The most common structures are three-band and four-band cable carriers.

The cable-carriers with double-band design are designed for a particularly long service life, such as the types LS/LSX1050 and MC1300. In this design, an additional side band is bolted to the existing one.

This results in maximum stability, allowing the double-band cable carrier to double its load capacity.

01 Selecting a suitable cable carrier

1.1 Required basic data for determination

The cable carrier is selected based on different factors which have to be considered in combination. The following parameters should therefore be already available when starting to select a cable carrier:

- » **Installation of cables and hoses**
(Number and diameters of the installed cables and hoses as well as the cable weight including media (kg/m), required minimum bending radius)
- » **Dynamic parameters**
(Travel speed, acceleration/deceleration, desired motion cycles)
- » **Motion sequence**
(For which type of motion is the cable carrier used?)
- » **Installation situation**
(How much space is available? Installation width? Installation height?)
- » **Operating temperature**
- » **Contamination and degree of contamination**
(Which type of contamination? Which amount?)
- » **Application-specific ambient influences**
(e.g. chips, oil, moisture, chemicals)

1.2 Selecting a suitable version

TSUBAKI KABELSCHLEPP offers a variety of cable carriers for all areas of application. The suitable product can be roughly determined with the available basic data.

Selecting the suitable material: side bands made of steel or plastic?

In addition to the environmental conditions, the selection of the suitable material is determined by the dynamic parameters and the load on the cable carrier. Plastic cable carriers have become established in many areas of application over the years. The application should always be examined in detail beforehand, though. The following table shows the operating parameters as a configuration tool for the suitable cable carrier material:

Operating conditions	Plastic	Steel	Operating conditions	Plastic	Steel
Travel speed > 2 m/s	+	-*	Vacuum	-	+***
Travel cycle > 1 million	+	-*	Extremely rough operating conditions (e.g. heavy industry, mining, drilling)	•	+
Continuous temperature			Very high mechanical load	•	+
< -40° C	-**	+			
-40° C to +100° C	+	+			
> +100° C	-**	+			
Acidic environment	-	+***			
Radioactive radiation	-	+***			

+ very suitable * possible as custom version
 • suitable ** special material available
 - not suitable *** stainless steel version available

Our technical support can provide help for critical applications: technik@kabelschlepp.de

Selecting the cable protection: open or closed cable carrier?

The selection of the suitable cable carriers can be further limited with the question whether the guided cables require additional protection (e.g. against foreign bodies) and whether a cable carrier with a cover system is practical.

The following table is a simple guideline; the exact choice should be determined after detailed examination of the specific application. In many cases, closed cable carriers are also used to hide the cables for visual reasons.

For very large accumulations of fine contamination (e.g. dust or sand), especially in combination with moisture, we advise against using the cover systems. This affects the function of the overlapping covers substantially.

Cover systems are available for steel and plastic cable carriers.

Operating conditions	Open cable carriers	Covered cable carriers
Coarse contamination (e.g. chips, metal parts, glass splinters)	•	+
Hot chips/metal spatter	-	+*
Visual protection (hiding the cables)	-	+
Very high incidence of fine contamination (e.g. sand, dust, scale)	•/+	-
Very fine contamination and moisture (e.g. moist dust)	•/+	-

+ very suitable
 • suitable
 - not suitable

* Also possible as steel band cover, see page 916
 Special materials for covers on plastic cable carriers possible

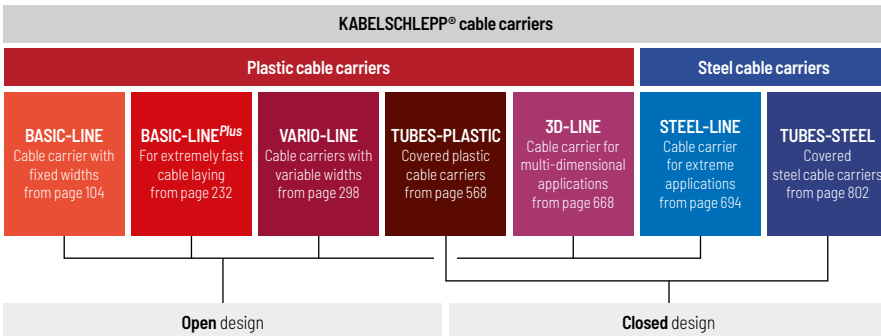

Example:
Cover system with chips

Negative example:
Cover system with high dust accumulation

According to the specification plastic/steel and open/closed, you can select the suitable cable carriers according to the following diagram in the respective catalog chapter:

Configuration guidelines	Cable carrier configuration

QuickTrax® series	UNIFLEX Advanced series
TKP35 series	TKK series
EasyTrax® series	

1.3 Defining the cable carrier size

The number and diameter of the cables to be installed play a major role here. Very often, the dimensions of the installation space for using a cable carrier are very limited. Both these prerequisites therefore have to be balanced.

The basic data of the cables to be installed are required for the further configuration of the cable carrier:

- » Type (cable or hose)
- » Outer diameter (d)
- » Cable weight incl. media (q_c)
- » Minimum bending radius (KR_{\min})

Please select a cable carrier with a sufficient inner height (see page 40). Adequate space on the side for placing the cables should also be planned for the initial configuration. They have to be arranged freely in the cross section of the cable carrier. The following minimum values for the required space apply:

Cables: $1.1 \times d$ (for diameter $d < 20$ mm, minimum required space: $d + 2$ mm)

Hoses: $1.2 \times d$ (for diameter $d < 20$ mm, minimum required space: $d + 4$ mm)

More information for installing cables can be found in chapter Placement guidelines on page 72.

TKK series

EasyTrax® series

The first draft for a so-called stay pattern can then look as follows, for example:

It is possible that the cable carrier becomes too wide with regard to the permitted installation dimension. In this case, a larger cable carrier can be used in combination with one of the divider systems. The placement could then look as follows, for example:

For the installation of cables in the cable carrier, please also take the selected installation variant into account (see page 76) which can have additional implications for loading the cable carrier. The different available stay variants (e.g. hole stay, tube stay) also allow different variations to suit the application.

This initial draft still has to be verified with regard to the further configuration of the cable carrier in the following (e.g. unsupported use).

Determining the bending radius KR

The chapter for the selected cable carrier contains the sizes of the available bending radii. The selection of the bending radii depends on the cables used. The information from the cable manufacturer regarding the dynamically moving minimum bending radius have to be taken into account for this.

The selected bending radius of the cable carrier has to be equal to or greater than the largest minimum bending radius of the cables to be installed.

We recommend using KABELSCHLEPP® cables which were specially designed for use in cable carriers.

1.4 Determining the cable carrier length L_k for simple linear travel

It is practical to place the fixed point connection at the center of the travel path. This provides the shortest connection between fixed and movable driver point and therefore the most economical cable carrier and cable length. Of course your cable carrier can also be installed with a fixed point outside of the center of the travel path. The calculation follows these examples:

For fixed point at the center of travel path L_s, the following applies for cable carrier length L_k:

Cable carrier length L_k
 $L_k \approx \frac{L_s}{2} + L_B$
 Cable carrier length L_k rounded to pitch t

The length of carrier in bend L_B is determined according to the selected cable carrier type:

Type	Length of carrier in bend L _B
Plastic cable carriers	$L_B = KR \times \pi + 2 \times t$
LS/LSX series	$L_B = KR \times \pi + 2 \times t$
S/SX series	$L_B = KR \times \pi + 4 \times t$
QUANTUM® series	$L_B = KR \times \pi + 12 \times t$
TKR series	$L_B = KR \times \pi + 2...4 \times t$

The calculated values can be found in the tables in the respective individual chapters.

For fixed point outside of the center of travel path L_s, the following applies for cable carrier length L_k:

Cable carrier length L_k
 $L_k \approx \frac{L_s}{2} + L_B + |L_v|$
 Cable carrier length L_k rounded to pitch t

Verification of the load values for unsupported arrangement

The term "unsupported arrangement" describes the condition when the upper run moves parallel to the lower run across the entire horizontal travel length.

The unsupported arrangement is the most common use of cable carriers. The unsupported length L_f resulting from the travel length, and its load on the cable carrier is determined with the cable weight to be guided q_z from the load diagram.

The load diagram therefore marks the area of the unsupported length L_f in which the cable carrier has no appreciable sagging or, in reverse conclusion, the maximum cable weight at which the cable carrier does not yet sag. If the travel length or the cable weight increases above the value stated in the diagram, the cable carrier starts to sag.

The specific load diagrams can be found in the individual chapters. Please note that the diagrams were determined with a specific intrinsic cable carrier weight. This means that the usable additional load can be reduced for large cable carrier widths or for cover systems.

Furthermore, the upper value q_z in the diagram indicates the maximum additional load of the cable carrier.

This value must not be exceeded.

The figure on the left shows an example for a load diagram with the most important parameters for determining the respective cable carrier load.

According to definition, the unsupported length L_f is the length at which the upper run of the cable carrier has no appreciable sag.

For steel cable carriers, sagging is not permitted as a rule. The higher flexibility of the plastic cable carriers allow a slight increase of the additional load or of the unsupported length. As a rule, we advise against this *unsupported arrangement with permitted sag* L_0 for reasons of dynamics and appearance.

Increased wear of the links also has to be expected. It cannot be ruled out, however, that in individual cases a solution may have to be implemented in this way at low travel speeds. In this case, please request the corresponding values from us.

We will be happy to advise you.

Exceeded the load diagram?

There are several options if the unsupported length of the cable carrier is exceeded:

- » Selecting a more sturdy cable carrier with a longer unsupported length and higher additional load
- » Using a multi-band carrier for increasing the additional load
- » Supporting the upper run after the fixed point: depending on the dynamic parameters, this arrangement can practically double the travel length. We are happy to help with configuring a suitable support structure.
- » For very long travel lengths, the cable carrier has to be configured as gliding or rolling.

More information on these installation variants can be found from page 76.

The overall length of the cable carrier

The cable carrier length L_K does not include the length l_1 of the end connectors. To be able to determine the correct required cable and hose length, the value L_{EF} is required. This is calculated as follows:

Overall length cable carrier L_{EF}

$$L_{EF} = L_K + l_1 \text{ Driver connection} + l_1 \text{ Fixed point connector}$$

1.5 Connection height, pretension & installation height

Kabelschlepp cable carriers are manufactured with pretension as a standard in order to implement the most extensive unsupported length possible. This produces an elevation of the upper run in the area of the unsupported length and is already considered in the load diagram.

The pretension increases the installation height of the cable carrier to the total value H_z . The connection height H and the installation height H_z are determined for each cable carrier type according to the following guidelines.

Connection height H and installation height H_z for plastic cable carriers

The values for determining the connection height H can be found in the respective individual chapters. They are generally determined as follows:

Installation height H_z is also listed in the respective individual chapters as an allowance for the pretension, specifically for each cable carrier.

Type	Connection height H
Plastic cable carriers*	$H = 2 KR + h_G$
M1300 series	$H = 2 KR + 1.5 h_G$
Q040 series	$H_{min} = 2 KR + 45 \text{ mm}$
Q060 series	$H_{min} = 2 KR + 88 \text{ mm}$
Q080 series	$H_{min} = 2 KR + 117 \text{ mm}$
Q100 series	$H_{min} = 2 KR + 143 \text{ mm}$
TKR0150 series	$H = 2 KR + 40 \text{ mm}$
TKR0200 series	$H = 2 KR + 72 \text{ mm}$
TKR0370 series	$H = 2 KR + 70 \text{ mm}$
TKR0260 series	$H = 2 KR + 88 \text{ mm}$
TKR0280 series	$H = 2 KR + 102 \text{ mm}$

* not for M1300

Installation height H_z for steel cable carriers

Due to the higher stability of steel cable carriers, the pretension z can already be taken into account on unsupported arrangements by slightly increasing the connection height H . This is based on the following calculation:

Connection height H for systems without support (unsupported)

$$H = 2 KR + 1.5 h_G$$

If the unsupported length is increased with support rollers or a continuous support frame, the upper run has to be placed parallel to the support plane.

Connection height H for systems with support

$$H = 2 KR + h_G$$

To be sure, another verification of the installation height H_z should be carried out for steel cable carriers depending on the pretension and cable carrier length. The following rule of thumb applies:

Installation height H_z

For example, the installation height H_z for a cable carrier length of $L_k = 5000$ mm increases by 50 mm. Depending on the installation variant, it is still necessary to operate the cable carrier without or with reduced pretension. This is possible on almost all types.

$$H_z = H + z$$

Pretension

$z \approx 10$ mm/m cable carrier length

1.6 Consideration of stability

In the tension end position, the stability of the cable carrier must be considered. For extensive unsupported lengths, the remaining small support area at the fixed point can reduce the stability for very narrow cable carriers. Accordingly, the ratio between bending radius KR and outer cable carrier width B_k should always be taken into account for dimensioning of the cable carrier.

— Support area

If the outer cable carrier width on an extensive unsupported length is significantly smaller than the required bending radius, the option of a lateral support should be considered if stability seems at risk. In this case, please contact our technical support.

1.7 Consideration of relative displacement

An arrangement where the cables are placed next to each other and separately should be preferred. This arrangement is recommended to keep the relative displacement of the cables as low as possible.

Due to the off-center placement, the cables move in the cable carrier by the value of the relative displacement. This can cause increased cable wear on the stays.

02 Placement guidelines for cables and hoses

Cable carriers are designed to protect moving energy lines and data lines which can be guided together in a variety of combinations. The following chapters list the guidelines which ensure configuration of the cable carrier system for maximum service life.

2.1 General guidelines

A "direction of view" is defined to allow a clear definition of the position of the cables in the cable carrier. For Kabelschlepp cable carriers, the view is always into the driver.

 Only cables which are suitable for use in cable carriers should be used, e.g. TRAXLINE® cables.

Cables and hoses have to be able to move freely in the cable carrier. They must not be attached or tied together.

The following guide values apply for dimensioning the required clearance:

- » **For round cables:**
10 % of the diameter*
- » **For flat cables:**
10 % of the cable width/thickness each
- » **For hoses:**
20 % of the diameter for pressure hoses**
10 % - 20 % for unpressured/low-pressure hoses*

* For diameter $d < 20$ mm, min. space requirement: $d + 2$ mm

** For diameter $d < 20$ mm, min. space requirement: $d + 4$ mm

Weight distribution for installation

For the installation of cables and hoses, please ensure that the cable weight is symmetrically distributed across the width of the cable carrier. Even loading can help the cable carrier to achieve its maximum service life.

Poor weight distribution

Good weight distribution

No cable loops

When cutting the cables for installation in the cable carrier, remove the cable from the coil tangentially and not in loops.

Do not twist cables

When cutting the cables for installation in the cable carrier, unwind the cable from the drum without twisting it.

Separating multiple cables

Adjacent cables with strongly differing diameters should be separated by dividers. Directly adjacent placement of cables with strongly differing diameters has to be avoided.

If this is unavoidable, ensure that the remaining clearance height is smaller than the smallest cable diameter. This is the only way to prevent the cables from becoming tangled.

Multiple layers

When placing cables in multiple layers, we recommend installing a height separation between the individual layers for electric cables.

Individually manufactured hole stays or partitions through dividers prevent adjacent cables from rubbing against each other. In many cases, it is beneficial to place each cable in a separate chamber.

A height separation always has to be installed between multiple layers of flat cables.

Collating in protective hoses

Thin hi-flex cables with low bending strength have to be loosely bundled and sorted in a protective hose. The cross section of the protective hose has to be significantly larger than the sum of the individual cable cross sections.

As a guideline for determining the cross section: each cable takes up approx. 10 % of its diameter as a clearance all around.

Cable carrier

It always has to be ensured that the cables can run through the bending radius KR without any tensions or force.

They have to move freely lengthwise and must not exert any towing forces on the cable carrier in the bend.

For multiple layer, the cables have to be placed in such a way that they also have enough clearance between them in the cable carrier bend.

Cable carrier configuration

Configuration guidelines

Materials information

Installing cables and hoses in closed cable carriers

For large numbers of electric cables in covered cable carriers or in energy conduits, the current carrying capacity of the cables has to be configured according to the applicable standards, regulations and recommendations so that the maximum permissible temperatures for the corresponding cable materials and the cable carrier material are not exceeded.

For your configuration, please note that this is a closed system.

MONO series

2.2 Placement of pressure hoses

QuickTrax® series

The following applies regardless of the partitioning type of the stay cross section:

Pressure hoses have to be able to move freely because they expand or contract during pressure changes!

Expansion or contraction can be compensated in the bending radius area. The required clearance can be calculated depending on the proportional change (manufacturer's information).

UNIFLEX Advanced series

If technically possible, we recommend placing each pressure hose in a separate chamber.

Pressure hoses are often attached to a tube directly before the driver and fixed point connection. Length differences, which result from the pressure change but also from manufacturing tolerances during installation of the hoses, can result in increased wear in the area of the bending radius.

TKP35 series

Hose too long

Hose too short

EasyTrax® series

For your configuration, please take into account a suitable length compensation for the hoses so they can run through the bending radius without tensions or force. It is often sufficient to provide a loop before the fixed point to compensate for the hose length.

2.3 Strain relief

The strain relief for the cables depends on cable type, length of the cable carrier and installation variant. Generally, it has to be ensured that the retention force is applied on the largest possible area of the outer jacket so that the cables are not crushed while also preventing displacement of the cables.

- » Within the **unsupported area** of the cable carrier, electric cables should preferably be equipped with a strain relief on the driver and on the fixed point. For short travel lengths and smaller cable diameters, we recommend the use of strain relief combs and cable ties for this application. LineFix clamps can also be used for larger cable carriers which use a C-rail.
- » **Longer travel lengths**, which require gliding operation of the cable carrier, should also be equipped with strain relief on the driver and on the fixed point. Secure strain relief, e.g. with LineFix clamps, has to be provided especially at the driver connection where push and pull forces are present. When using the strain relief at the fixed point of a gliding cable carrier, it primarily has to be ensured that the installed height of the strain relief is significantly smaller than the chain link height h_C in order to prevent a collision. For slow travel speeds, it is often sufficient to provide fixation with a strain relief comb and cable ties on the fixed point of gliding cable carriers.
- » For vertically operating cable carriers, the cables also have to be provided with a strain relief on the driver and on the fixed point. For hanging cable carriers with very long travel lengths and high cable weights, it can be practical to install a double strain relief arrangement on both sides.
- » Pressure hoses which will not be bolted on in direct proximity to the driver or fixed point also have to be provided with a strain relief, in the same way as the cables. We recommend the robust block clamps for this case.

2.3.1 Strain relief for gliding cable carriers

Strain relief on the driver cable carrier end

After moving the cable carrier driver (moving cable carrier end) to the **pushing end position**, the cables are provided with a strain relief at the moving cable carrier end.

Correct cable length in the cable carrier

After moving the cable carrier driver (moving cable carrier end) to the **pulling end position** of the cable carrier, the cables are checked for tension-free length in the bend and, if necessary, "fed further into the cable carrier".

Strain relief on the fixed point cable carrier end

With this tension-free "inserted length", the cables are finally provided with a strain relief at the fixed point cable carrier end.

i Test operation of the cable carrier: After an initial test run, check the tension-free cable routing and, if necessary, adjust the strain relief at the fixed point.

INV 1

Horizontal arrangement, unsupported

For unsupported arrangement, the driver connection of the cable carrier is attached to the movable system part and moves with it in the horizontal direction.

The upper run of the cable carrier is free, i.e. without support and without sag, parallel above the fully supported lower run.

The formulas and configuration information for this installation variant can be found in the chapter "Determining the cable carrier length L_k for simple linear travel" on page 67.

Configuration guidelines

Special case

Horizontal arrangement, unsupported with overhang

The lower run of the cable carrier is not supported across the entire length. We are happy to calculate the required dimensions $A + \ddot{U}$ for your individual application.

Please contact us for individual project planning for your specific application. We will be happy to help.

Rule of thumb

$$\ddot{U}_{\max} \leq \frac{L_f}{4}$$

TSUBAKI KABELSCHLEPP technical support

If you have any questions about cable carriers or technical details please contact our technical support service at technik@kabelschlepp.de. We will be happy to help you.

INV 2

Horizontal arrangement with support

i If the unsupported length of the cable carrier is exceeded, the upper run can be supported.

We recommend using the next larger type instead of a cable carrier with support(s), if the installation situation allows this.

Support for the upper run is generally possible for almost all cable carriers. The support stand used for plastic cable carriers always has to be equipped with start-up levels. The upper run should be supported as far as possible.

Arrangement of the support

Due to the flexible material and the potential sag, however, there are limitations on the use of supports for plastic cable carriers. The following section therefore examines the arrangement of the support for **steel cable carriers with support rollers**:

Arrangement with one support roller:

for $L_S < 3 L_f$ $a_R = \frac{L_S}{6}$

The distance of the support from the fixed point is approx. 1/6 of the travel length!

Arrangement with two support rollers:

for $L_S < 4 L_f$ $a_{R1} = 300 \text{ mm}$
 $a_{R2} = \frac{L_S}{4} - 150 \text{ mm}$

First support 300 mm behind the fixed point, second support at the center of the remaining unsupported length!

A travel speed of 1 m/s should not be exceeded. When using support rollers, the length L_f should only be 80 % of the value resulting from the load diagram, if possible.

Special version with lateral rollers:

for $L_S < 4 L_f$

To utilize the maximum possible travel length in an unsupported arrangement with stationary support structure.

The lateral track rollers are mounted on the chain links. An even running surface has to be ensured, with a support tray provided if necessary.

INV 3

Horizontal arrangement, gliding in the guide channel

 The upper run of the cable carrier **glides** on the lower run or on a gliding surface of the associated guide channel.

Application: For long travel lengths which cannot be implemented as unsupported arrangements.

Condition: The cable carrier must be guided in a channel, though!

Different cable carrier types provide the option of using glide shoes on the inner radius. These are manufactured from a special sliding and wear-resistant plastic. This allows the sliding friction factor to be reduced to a value of $\mu < 0.2$.

For steel cable carriers, the use of these elements is mandatory to prevent gliding of "steel on steel". The travel speed, however, should not exceed 1 m/s for gliding steel cable carriers. For steel cable carriers, the glide shoes are bolted onto the side band.

For plastic cable carriers, the glide shoes are simply clipped on the inner radius and can therefore easily be replaced if necessary.

To reduce wear and increase the service life, we recommend using the abrasion resistant glide shoes for gliding applications. For travel speeds > 2.5 m/s, however, glide shoes should always be used.

Arrangement of the cable carrier

Single-sided arrangement with lowered driver connection and reverse bending radius (standard)

The cable carrier length is always calculated with the same formula as for the unsupported arrangement:

Cable carrier length L_k

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length L_k rounded to pitch t

For the standard arrangement of the cable carrier, the driver connection is reduced for load reasons:

Connection height H

$$H = 3h_g$$

The length of carrier in bend L_B is increased by the lower driver connection and the resulting cable carrier extension. To keep this elevation of the length of carrier in bend as small as possible, chain links with reverse bending radius (RKR) are used on the driver connection as a standard. This results in a slight S-shape for the bend in the thrust end position. The respective values for L_B can be found in the respective individual chapters for the cable carriers.

For the configuration of this installation variant we recommend the simple way of determining the cable carrier length using our Configurator at online-engineer.de or requesting support from our support team.

Opposite arrangement with lowered driver connection and reverse bending radius

If the cable carrier is wider than the available space due to a very large number of cables, a second cable carrier can be used, running in the opposite direction. This almost halves the total width because the cables can be distributed among both cable carriers.

The cable carrier length is then determined in the same way as for single-sided arrangements. For only one moving consuming unit and a joint travel path, both cable carrier lengths have to be the same. As both cable carriers run in a guide channel, it must be ensured that they have the same outer width. More information and the details for dimensioning the guide channel can be found in chapter Support trays and guide channels on page 844.

INV 4 Vertical arrangement, hanging

i **Direction of movement:**
only vertical
For a purely vertical movement process, the cable carrier can be mounted without special lateral support.

i **Direction of movement:**
vertical/horizontal combined
For a combined vertical/horizontal movement process, the cable carrier can be mounted without special lateral support.

i **Direction of movement:**
only vertical
If the entire system moves at a right angle to and/or alongside the hanging cable carrier, an additional lateral guide has to be mounted.

Please observe the guidelines for placement of cables in cable carriers from TSUBAKI KABELSCHLEPP, s. page 72.

It is practical to install the cable carrier **without or with only little pretension**. As no direct load occurs in the hanging arrangement, pretension causes the cable carrier to bulge outwards from the pretension. In addition to the visual aspect, this significantly increases the installation dimensions.

The **cables have to be fixed** to the driver and fixed point in such a way that their weight and the resulting dynamic load are absorbed only by the strain relief. Determining the cable carrier length see page 67.

EasyTrax® series

INV 5

Vertical arrangement, standing

The cable carrier is mounted in such a way that parallel running of active run and passive run is ensured.

Determining the cable carrier length see page 67.

End connectors

The end connectors have to be mounted on the machine part (fixed point/driver) in such a way that the cable carrier cannot bend outwards, i.e. the connection must be **rigid**.

Connection height H

$$H = 2 KR + h_g$$

The distance between fixed point and driver connection corresponds to the selected bending radius.

Support

The cable carrier generally has to be supported on the outside at the fixed point and at the driver.

The length of the support has to be defined depending on the additional load, the fill level, the travel length and the selected cable carrier.

Depending on the version of the support, the cable carriers are very often used with a slight pretension. If a short cable carrier does not require any support and if there is sufficient installation space, the standard pretension can be used. Use without pretension may result in the cable carrier bending. This is therefore not advisable.

Direction of movement

Often, the complete unit additionally moves at a right angle to the vertical standing cable carrier. In this case, the cable carrier additionally has to be guided laterally.

As a rule, only relatively short travel lengths can be implemented with the standing arrangement. If possible, the cable carrier should alternatively be used in a hanging arrangement. For this installation variant, the load on the overall system is significantly lower than with a standing arrangement.

INV 6

Horizontal arrangement, rotated 90° (straight)

i The cable carrier used in normal horizontal direction is rotated by 90°, i.e. it glides on its outside or on special slide discs on a tray or in a channel. This arrangement can be implemented with almost all cable carrier types.

Application: Generally, cable carriers “rotated 90°” are used when the installation situation is primarily short on space with respect to height, preventing normal horizontal installation.

The installed cables have to be guided in the cross section of the cable carrier with **fixed separating elements** or in a **hole stay**, clearly separated from each other. This is the only way to prevent damage in the long run.

The technically best solution is the hole stay which provides the most secure guiding for the cables.

Frame stay with movable dividers

Frame stay with fixed dividers

Best possible separation of cables in a hole stay

Systems for short travel lengths (with/without support)

The cable carriers can be used **unsupported** in the horizontal arrangement “rotated 90°” to a limited extent. The permitted unsupported length depends on the following parameters for this installation variant as well:

- » additional load q_z
- » bending radius KR
- » connection option
- » travel length L_S
- » cable carrier width B_k

If the additional load and the unsupported length are too high, the cable carrier has to be supported on one side or overall.

System without support

System with single-sided support

System with overall support

System for long travel lengths (gliding in a guide channel)

Plastic cable carriers can be used for travel lengths far over 100 m with the arrangement "rotated 90° – straight".

Over a period of more than 65 years, we have built multiple systems with the arrangement "single-sided" or "opposite" with or without special auxiliary fixtures.

Single-sided arrangement (with stepped guide channel)

b_{KA} = channel width of narrow section
 l_{KA} = length of narrowed channel

Opposite arrangement

The cable carrier "rotated 90°" for long travel lengths **must** be guided in a channel. The material and texture of the channel base must be selected so they ensure low-wear travel with the lowest possible friction forces.

For long travel lengths, the cable carriers are used without pretension.

For **steel cable carriers**, corresponding gliding and guiding elements are mounted on the outside and/or inside of the side band, preventing grinding along the channel walls and ensuring smooth running of the system.

Support and guiding elements (combination examples):

Gliders on upper and lower side band

Gliders on the top and domes on the lower side band

Rollers on the top and **double steering rollers** on the lower side band

INV 7

Horizontal arrangement, rotated 90° (circular)

For this arrangement, the cable carrier rotated 90° is connected to machine parts which carry out a circular movement.

The combination of bending radius KR and reverse bending radius RKR causes the cable carrier to move in two circular directions in a targeted and defined manner.

The cable carrier system is connected to the inner and outer rings of a guide channel. The rotating ring (inside or outside) is the driver connection.

Application: Generally, cable carriers in this arrangement always have to be guided in a channel. The driver can be positioned inside or outside.

A special chain link design is required to allow the cable carrier to execute a circular movement.

The installed cables have to be guided in the cross section of the cable carrier with **fixed separating elements** or in a **hole stay**, clearly separated from each other. This is the only way to prevent damage in the long run.

The technically best solution is the hole stay which provides the most secure guiding for the cables.

Frame stay with movable dividers

Frame stay with fixed dividers

Best possible separation of cables in a hole stay

Due to the strong relative displacement and the continuously changing radius ratios, cables should only be installed in one layer to ensure maximum service life.

For **steel cable carriers**, corresponding gliding and guiding elements are mounted on the outside and/or inside of the side band, preventing grinding along the channel walls and ensuring smooth running of the system (see page 84).

Cable carrier configuration

Configuration guidelines

Materials information

MONO series

QuickTrax® series

UNIFLEX Advanced series

TKP35 series

TKK series

EasyTrax® series

Single-sided arrangement

with offset guide channel (schematic diagram)

The cable carrier system shown here has the driver on the inner radius. There are also frequent applications where the driver has to be positioned on the outer radius.

To ensure sufficient guiding of the cable carrier in this case, moving guide plates are required for larger angles of rotation. As this version is more complex, the "inside rotating circular arrangement" should be preferred.

Opposite arrangement

with guide carriage (schematic diagram)

For opposite arrangements, a moving support fixture or a guide carriage has to be positioned in the channel due to the combination of KR and RKR.

Coupling of multiple circular systems is possible for angles of rotation over 500°.

Abbreviated symbols:

- a = fixed point angle
- b = travel length
- B_E = width of cable carrier
- b_{KA} = channel width of narrow section
- B_{KA} = channel width
- H_E = height of cable carrier
- H_{KA} = height of the guide channel
- r_{KA} = channel radius - inside
- R_{KA} = channel radius - outside
- F = fixed point
- M1 = driver end position 1
- M2 = driver end position 2

Due to the variety of configuration options for this installation variant, we recommend contacting our technical support. We require the following parameters for preparing a solution:

- » inner diameter
- » outer diameter
- » travel length (angle of rotation)
- » single-sided or opposite arrangement?
- » driver on inner or outer radius? (inner radius preferred for single-sided arrangement)
- » restrictions for the installation space? (e.g. installation height)
- » cable list
- » environmental conditions (e.g. chips, dirt)

INV 8

Horizontal arrangement, rotated 90° (rolled)

i For this arrangement, the cable carrier rotated 90° is connected to a consuming unit which carries out a circular movement. The travel length "B" is indicated in degrees!

Application: The application is designed for circular movements which are wound on a rotating body. This type of cable carrier is preferred for smaller systems, usually with large movement angles.

A standard cable carrier is used. A reverse bending radius is not required. The winding of the carrier limits the angle of rotation to approx. $B = 270^\circ$. For the implementation of larger angles of rotation, additional guide plates are required to prevent a collision on the driver. This application is practically a combination of installation variants 6 and 7. Accordingly, similar configuration criteria are used.

INV 9

Horizontal-vertical combined arrangement

i Our cable carriers can also be used for combined horizontal/vertical movements.

This arrangement requires no special technical preconditions, but calculation of the cable carrier length is more complex and should be carried out by our technical support.

INV 10

Unsupported arrangement, nested

i This arrangement is possible for all cable carriers. If the available space do not permit installation of a cable carrier due to the required width, the system can be configured in a **nested** arrangement.

For smooth running, it has to be ensured that both cable carriers can move freely. This means sufficient distance between the upper run (min. 20 mm, depending on cable carrier type) and the carrier bends (min. half of chain link height).

For long steel cable carriers there is an option for positioning guide plates at the side band of the outer carrier to ensure alignment of the inner carrier.

Cable carrier

Cable carrier configuration

Configuration guidelines

Materials information

MONO series

QuickTrax® series

UNIFLEX Advanced series

TKP35 series

TKK series

EasyTrax® series

INV 11

Zig-zag arrangement

For some areas of application (e.g. stage and storage systems), it is often not possible to use a vertical hanging or standing cable carrier due to space restrictions. The so-called zig-zag arrangement is used in these cases.

As several bends fold on top of one another, the cable carrier has to be guided in all directions and therefore settles into a type of basket or sheet steel housing.

The following parameters are required for dimensioning the system:

- » travel length
- » travel speed
- » cables installed
- » minimum bending radius of guided cables
- » maximum permitted basket dimensions (length, width)
- » maximum permitted height

When dimensioning the basket length, ensure that the unsupported length L_f of the selected cable carrier is not exceeded. Depending on the length and weight of the cable carrier, supporting the bend on the driver with a bent plate is a measure which has a positive effect on the service life.

INV 12

Vertical arrangement, hanging with support bolt

The vertical arrangement of the cable carrier with additional support elements offers the option of using the cable carrier as a lifting element for the attached system parts (e.g. operating panels, manipulators).

The cable carrier is driven via chain wheels. The pitch circle diameter has to be equal to or greater than the selected bending radius of the cable carrier. The drive is motorized or via a counterweight.

Due to the great number of configuration aspects, we would ask you to contact our technical support.

Cable carrier

Cable carrier configuration

Configuration guidelines

Materials information

MONO series

QuickTrax® series

UNIFLEX Advanced series

TKP35 series

TKK series

EasyTrax® series

INV 13

Horizontal arrangement, curled

i In some cases, a large angle of rotation cannot be implemented with one of the usual applications for circular movements. In these cases, an examination with regard to the options for curling up the cable carrier is recommended.

A standard cable carrier can be used, but a relatively large installation space is required for curling up the configuration.

The rotation in this application is limited by a maximum double wrapping of the inner diameter. Multiple wrappings cause the cable carrier to jam.

INV 14

Vertically rotating arrangement, hanging

i This installation variant is often used for swiveled drums and turning devices.

The part rotating around the diameter requires chain links with KR and RKR in this area.

If the angle of rotation is over 180° (depending on the arrangement), an additional guide plate is required on the outer radius to prevent the cable carrier from tipping over.

INV 15

Roller chain

i Roller chains are primarily used where very long travel lengths lead to very high push and pull forces and gliding cable carriers reach their limits. The most effective installation variant is the RSC (rail supported carrier) system. This is a cable carrier where the design in combination with an optimized guide channel ensures 100 % roller operation over the entire travel length. This results in minimum mechanical load and a low noise level.

This makes the system suitable not only for extremely long travel lengths, but also for travel speeds over 5 m/s.

Despite the roller design, the RSC system can be fully wound on a reel and is therefore ideal for complete solutions with inserted cables for long travel lengths.

Dimensioning is similarly easy as for a gliding cable carrier. For effective and fast implementation, especially for large projects, we can offer our expert help.

INV 16

Arrangement with continuous support structure

While this installation variant is also possible for plastic cable carriers, it is primarily used for steel cable carriers.

If the technical conditions no longer permit the use of a gliding cable carrier or a cable carrier with support rollers with regard to travel length, acceleration or speed, a so-called cable carrier unit with a continuous moving support structure can be used.

Cable carrier units are particularly suitable for use with large travel lengths and high travel speeds under rough operating conditions and heavy loads. There is a variety of different versions of this installation variant. As an example, we present the most used type 225 here.

Due to the complexity, this type of cable carrier system should be dimensioned in cooperation with our engineers.

Cable carrier installation type 225

The cable carrier installation is either configured as a single-sided system with one cable carrier installation or as an opposite arrangement with two cable carriers.

A carriage guided on rollers in a running frame supports the cable carriers along their entire length. The support structure is moved in both directions with a cable pull system which is attached to the rolling carriage system. Due to the roller support and roller guiding of the cable carriers on the

support carriage and of the support carriage on the running frame, only minimal friction forces are generated in the system. Systems with the following limit values have been supplied so far:

- » longest travel length: $L_{S \max.} = 222 \text{ m}$
- » highest travel speed: $v_{\max} = 4 \text{ m/s}$
- » greatest travel acceleration: $a_{\max} = 8 \text{ m/s}^2$

Single-sided arrangement

(schematic diagram)

Opposite arrangement (schematic diagram)

Cross section of the cable carrier installation

Abbreviated symbols:

- B_D = clear width in the running frame
- B_G = running frame width
- B_k = cable carrier width
- B_W = support carriage width (max. width)
- H = installation height of the cable carrier(s)
- H_G = running frame height
- L_G = running frame length
- L_S = travel length
- L_W = support carriage length

The cable carrier installation type 225 consists of the following assemblies:

- 1 Cable carrier(s)**
with laterally attached track rollers and guide rollers
- 2 Support carriage** with track rollers and guide rollers supporting across the entire length
- 3 Rolling carriage system** with track rollers and guide rollers
- 4 Running frame**
- 5 Steel cable**
- 6 Cable tensioning roller**
- 7 Tensioning device**

Material selection

The composition of different materials allows customers to select the individual cable carrier for their application.

The selection of the right material is often linked to the following parameters:

- » Friction values
- » Friction partners
- » Ambient temperature
- » Robustness
- » Optics
- » Noise emission
- » Contamination
- » Humidity

01 Plastics

1.1 Standard materials

The standard plastic used for most of our product is a PA6 GF35.

This material has the best price-performance ratio, confirmed by countless internal tests and by our customers, to meet the requirements for modern cable carriers.

The use for standard products is structured as follows (information refers to the side bands and other components, see p. 95):

Series	Plastic for main components	Series	Plastic for main components
BASIC-LINE		VARIO-LINE	
MONO series	PA6 GF35	M series	PA6 GF35

VARIO-LINE		3D-LINE	
K series	PA6 GF35	ROBOTRAX® system	POM
UNIFLEX Advanced series	PA6 GF35		

1.2 Special materials

Special materials are modified plastics which are suitable for applications outside the standard. There are different variants for a variety of different requirements. The following table can help with the selection of the correct material for the application at hand. It has to be noted that not all materials can be used in all products. Please contact us.

Plastic type	Property	Code
PA6 GF35	Standard material for common applications Performance range according to material data sheet	7422 7370
PA6.6 GF	Special material for ATEX application following ATEX Directive 2014/34/EU	7400
PA66 GF50	Standard material for UMB	7419
POM	Standard material for ROBOTRAX®	7412
PA6 GF30	Impact-strength-modified special material for use in cold environments	7488
PA46 GF30	Modified special material for use in hot temperature areas	7341
PA66 GF25	Modified special material with special requirements for fire behavior (VO)	7414
PA66 CF	Modified special material with conducting properties for voltage (ESD)	7366

1.3 Material code

Codes are assigned to each plastic to differentiate between the different plastic materials. The code has four digits and can be identified as a simplified code on most plastic components. This is embossed into the component on a material dial at the side of the chain links of the cable carrier.

Code	Coding	Material

1.4 Colors

The price is always based on the colour black. In addition, there are other individual colours in our assortment, which are manufactured article-related and belong to the standard. For all other colours additional costs, minimum quantities and delivery times have to be considered.

Colours which are not included in the table are, if technically possible, individually calculated according to article and quantity. All technical values regarding stability and material properties apply only to black versions. Coloured cable carriers and articles made of special material have changed properties and are not always available in all colours for technical reasons.

1.6 Ambient conditions for standard materials

Weather

The plastic used by TSUBAKI KABELSCHLEPP is ideal for outdoor use. The mechanical properties of the cable carriers are not affected.

7422 is UV resistant!

Radiation resistance

Depending on the intensity, plastic cable carriers can also be used conditionally under the influence of radioactive radiation. If possible, we recommend the use of steel cable carriers.

Please consult us in any case!

Burning behavior

The plastic used by TSUBAKI KABELSCHLEPP was tested as per UL 94.

More information on request. **Please contact us!**

1.7 Ambient conditions for special purpose materials

High-temperature resistance

Our special purpose material 7341 is high-temperature resistant and therefore ideal for use in high-temperature areas. Please contact us, as not all special purpose materials are available for all cable carrier types and temperature ranges.

More information on request. **Please contact us!**

Thermal properties	Permissible temperature range
Continuous ambient temperature	+20 to +150 °C
Up to max. 5000 hours	up to +185 °C
Short-term	up to +285 °C

Cold store resistance

Our special purpose material 7488 is low-temperature resistant and therefore ideal for use in cold stores and extremely low temperatures.

More information on request. **Please contact us!**

Thermal properties	Permissible temperature range
Continuous ambient temperature	-50 to +40 °C

These cable carriers can only be manufactured in the color yellowish/white (transparent).

02 Metals

2.1 Steel and aluminum properties

Type	Use	Code
Steel		
Galvanized steel	All applications which do not require any special corrosion protection, especially for general machinery and plants, as well as in areas of application where plastic cable carriers are not permitted due to their load capacity, strain, elasticity and ambient conditions (link plates, channel parts, connecting elements, connections, etc.)	St vz
Hardened steel, black coated		Sb
Stainless steel similar to 1.4301; AISI304	Same areas of application as galvanized steel, but with special requirements for corrosion resistance (link plates, channel parts, connecting elements, connections)	ER1
Stainless steel similar to 1.4571; 1.4404; AISI316T; AISI316L	Same areas of application such as galvanized steel, but with special suitability for ambient conditions with salt concentration, e.g.: ports, food compatibility (link plates, channel parts, connecting elements, connections)	ER 1S
Stainless steel similar to 1.4462; 318LN	High strength for applications in the chemical and petrochemical industry, offshore, textile industry, cellulose production, dyeworks, paint industry, synthetic resin industry, rubber industry, shipbuilding	ER 2
Light alloy		
Aluminum alloy	Perfect gliding partner for cables and hoses, very good cold resistance and salt-water resistance (stays, hole stays, height separations)	Al

2.2 Area of application according to product series

Some products and product groups consist of a variety of different materials. The use for the metals is structured as follows (information refers to the side bands and other components):

Series	Main metal components
STEEL-LINE	
LS series	Sb
LSX series	ER1
S series	St vz
SX series	ER1, ER1S, ER2
Metal stays, covers	Al

Our materials have different application temperatures. The following table shows the application temperatures for the most frequently used materials.

Material	Upper continuous application temperature	Lower continuous application temperature
PA6 GF35	+ 100 °C	- 30 °C
Galvanized steel	+ 210 °C	- 40 °C
ER1	+ 500 °C	- 80 °C
ERIS	+ 550 °C	- 80 °C
ER2	+ 250 °C	- 100 °C
Aluminum	+ 140 °C	- 80 °C

TSUBAKI KABELSCHLEPP technical support

If you have any questions about cable carriers or technical details, please contact our technical support at technik@kabelschlepp.de. We will be happy to help you.

04 Tribology

Low jacket abrasion is an essential prerequisite for a long service life of the cables in a cable carrier. In addition to the jacket material, the stay material as the support surface for the cables affects jacket abrasion. We have analyzed the abrasion on different cables with different stay materials in extensive tests.

Aluminum stays proved to be a gentle support for the cable jackets. This result does not depend on the cable manufacturer and applies to all jacket materials tested. Jacket abrasion is of minor importance for many standard applications. Simple solid plastic cable carriers from BASIC-LINE and BASIC-LINE^{PLUS} can be used without problems in these cases.

For more challenging applications with large relative movements between stay and cable, the outer cable jacket is subject to a high level of wear through abrasion. In these cases, we recommend using cable carriers with aluminum stays to increase the service life of the cables.

Save costs through lower jacket abrasion on cables

Abrasion from 3 million movement cycles and a relative displacement between stay and cable of 10 mm.

In addition to reducing abrasion, aluminum is ideal as a stay material due to its high strength and low intrinsic weight. Cable carrier widths up to 1000 mm can be achieved without putting special strain on the cable carrier through additional weight.

5.1 Protection against explosions

The Atex 2014/34/EU is the applicable EU explosion protection directive which must be fulfilled by devices and protection systems for use in explosive atmospheres. This also requires the prevention of explosive electrostatic discharge (ESD).

One method for preventing explosive ESD is a sufficiently low surface resistance of the affected component. Low surface resistance of a material acts like an electric short circuit and leads to a charge compensation of charged surfaces. This means that no explosion can be triggered in an explosive atmosphere.

Our special material 7400 was tested and certified by the National Metrology Institute of Germany (PTB) in Braunschweig. The surface resistance of less than $10^6 \Omega$ is clearly below the maximum limit value of $10^9 \Omega$ required in applicable regulations. This means that this material can be used for all devices and protection systems in explosive atmospheres without limitations.

Please contact us if you require KABELSCHLEPP cable carriers for use in explosive atmospheres. In addition to competent advice, we can provide you with all documentation required by the ATEX Directive, such as Declaration of Conformity, operating instructions, etc.

Our explosion-protected cable carriers can be used for all devices which are covered by the ATEX Directive 2014/34/EU.

5.2 Conductive ESD cable carriers

Electrostatic discharge (ESD) is a hazard when manufacturing and processing electronic components. If no adequate protection is provided, damage can occur. The requirements for materials, tools and therefore also cable carriers are defined in the ESD standard DIN EN 61340.

Our proven ESD cable carriers, which are made of our special material 7366, meet the requirements of the ESD standards with regard to conductance and resistance behavior.

Increasing miniaturization for semiconductor components leads to greater ESD sensitivity and therefore requires better ESD protection.

This requires a lower surface resistance of the plastic cable carriers used for handling and assembly.

Our ESD cable carriers meet the requirements of the ESD standards DIN EN 61340-5-1 and DIN EN 61340-5-2.

Low surface resistance through nanotubes

Our ESD material is modified through nano technology and equipped with carbon nanotubes, among other things.

Carbon nanotubes are used as a functional filler. Due to their graphitic surface structure they have a high electric conductance. Cable carriers made from this material have a surface resistance of $\leq 10^5 \Omega$ which far exceeds the values required by the ESD standard.

Carbon nanotubes have a diameter of only a few nanometers and a length of up to a few millimeters.

Cable carriers with nanotubes

- » Low surface resistance: $\leq 10^5 \Omega$
- » Significantly exceed the values required by the ESD standard
- » Areas of application: chip handling, semiconductor manufacturing, electronics manufacturing, solar technology

Higher conductance of the complete cable carrier

The large specific surface and the extremely even distribution of the nanotubes in the material achieves good conductance even at the contact points between the chain links and therefore across the entire cable carrier length. A resistance of $\leq 10^5 \Omega$ was measured on a KABELSCHLEPP cable carrier of type UA 1455.030.078.052 with a length of 88 links (= 4 m).

Quality with factory certificate

Each ESD cable carrier with nanotubes technology is supplied with a KABELSCHLEPP factory certificate to certify its quality.

High stability

The modification of the fiberglass-reinforced material with nanotubes makes the cable carriers even sturdier.

The nanotubes have a sixth of the weight of steel but their tensile strength is multiple times higher.

This also increases the mechanical properties while retaining the high elasticity of the cable carriers made of ESD material. This effect is also applied successfully in numerous sports equipment, e.g. tennis rackets, bicycles and golf clubs.

High conductance even after one hundred thousand movement cycles

The test shows that the surface resistance of the complete cable carrier decreases during the running-in phase and then remains constant at $10^4 \Omega$.

Surface resistance
ET UA 1455.030.078.052-4004 with ESD material

BASIC-LINE

Solid plastic cable carriers with fixed chain widths

The BASIC LINE comprises a variety of different product types with pre-defined cable carrier widths. All combine robustness and reliability with an attractive price-performance ratio. Fast and easy installation of cables and hoses is another distinguishing feature of these cable carriers.

- » Cost-effective solutions for standard applications
- » Types and designs with fixed or opening crossbars
- » Numerous types and designs available immediately from our warehouse
- » Fast installation of cables and hoses
- » Ideal for short travel lengths and high travel speeds
- » Types for long travel lengths available

Inner height
11 mm

Inner widths
6 - 20 mm

Bending radii
18 - 50 mm

Types

Type 0202..... page 124

Closed frame (design 020)

- » Weight optimised, closed plastic frame with high torsional rigidity.
- » **Outside/inside:** not openable.

Fast cable laying – 0202 slotted version

The slotted variant of the MONO 0202 allows fast and easy pressing in of cables without opening the cable carrier. That saves time and therefore money. It is particularly suitable for cables with pre-assembled connectors. Please contact us!

Unsupported arrangement

KR [mm]	H [mm]	H _z [mm]	L _B [mm]	U _B [mm]
18	51	61	97	45,5
28	71	81	128	55,5
38	91	101	160	65,5
50	115	125	198	77,5

Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 0.18 \text{ kg/m}$ with $B_3 10 \text{ mm}$. For other inner widths, the maximum additional load changes.

QuickTrax[®] series

Compact and cost-effective
cable carriers in
two-component technology

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Sturdy 2-component design: hard chain body, flexible film hinge
- 2 Plastic chain links
- 3 Extensive unsupported length
- 4 Inside space is gentle on the cables – no interfering edges
- 5 Very quiet through integrated noise damping
- 6 Quick and easy to open
- 7 Inside/outside openable
- 8 Dividers and height separators for cable separation
- 9 Single-part end connectors with and without integratable strain relief

Features

- » Extremely fast and easy cable laying thanks to crossbar with film hinge
- » Each chain link consists of two different materials:
 - Hard chain body made of glass-fibre reinforced material
 - Crossbar with flexible film hinge made of elastic special plastic

- » Sturdy cable carrier design
- » High torsional rigidity
- » Very quiet through integrated noise damping
- » Extensive unsupported length

Easy to open...

...even without tools

High side stability

Reliable cable separation

EasyTrax® series

The two-component technology of the QuickTrax®

The two-component technology of the **QuickTrax®** combines two seemingly incompatible features: **Stability and flexibility.**

Cable carriers need to be extremely sturdy, with extensive unsupported length. At the same time, cables need to be inserted easily for fast cable laying.

The **QuickTrax®** meets these requirements thanks to its innovative design and material combination of a hard cable carrier body made from glass fiber-reinforced material and crossbars with a film hinge made from rigid special plastic.

high flexibility

high stability

Comparison of dimensions

Manufacturer	h_i [mm]	h_G [mm]	t [mm]	Identical connection hole pattern
QuickTrax®	20.0	25.5	32.0	yes
Competitive product	17.5	23.0	30.5	yes

Comparison of bending moment

Comparison of bending strength

Load diagram

for unsupported length depending on additional load

Advantages over competitive product

- » 20% longer unsupported length compared to competitive product
- » 33% greater additional load through use of fiber glass reinforced plastic
- » Greater inner height
- » Low noise operation due to internal damping system
- » High side stability through locking in the stroke system
- » Dividers can be used for cable separation

Divider systems

The divider system is mounted on every 2nd chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed on the stay through rotation.

The arresting cams snap into the catch profiles in the covers (**version B**).

Light, quiet all-rounder with a
wide range of applications*

* Some features can be different
for certain types for design reasons.

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH as
a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Universal mounting bracket (UMB) with integratable strain relief comb
- 2 Designs with inside or outside opening stays
- 3 Extremely fast and easy to open due to ball joint mechanism
- 4 Top-mounted frame stay
- 5 Single-part links (type 020)
- 6 Favourable ratio of inner to outer width
- 7 Many separation options for the cables
- 8 Robust double-stroke system for long unsupported lengths
- 9 Easy divider fixing
- 10 Very quiet through integrated noise damping
- 11 Lateral wear surfaces
- 12 Single-part end connectors with integratable strain relief comb

Features

- » Extensive unsupported lengths
- » High torsional rigidity
- » Good ratio of inner to outer width
- » Numerous custom material types for custom applications available
- » Easy assembly and fast cable laying
- » Assembly tools available
- » Stays with ball joint opening on both sides
- » Many possibilities for internal subdivision
- » Wear surfaces for gliding applications with extended travel lengths

Fixable dividers for arrangements rotated by 90° and applications with high lateral accelerations – no additional spacers required

Lateral wear surfaces – for long service life for applications where the carrier is rotated through 90°

Simple fixing of strain relief comb or C-Rail in the connector

EasyTrax® series

Single-part end connectors long – plastic

The plastic end connectors can be connected **from above or below** and allow a **1:1 replacement of the UNIFLEX 0455 in the connection area**. The connection type can be changed by altering the position of the end connector.

B_i: 25

B_i: 38-130

▲ Assembly options

 Recommended tightening torque:
6 Nm for screws M6 - 8.8 and washers

B _i [mm]	n ₂
25	2 x 2
38	2 x 3
58	2 x 4
78	2 x 6
103	2 x 8
130	2 x 10

The end connectors are optionally also available **without strain relief comb** (except B_i 25). Please state when ordering.

Connection point

- F** - fixed point
- M** - driver

Connection type

- A** - threaded joint outside (standard)
- I** - threaded joint inside
- H** - threaded joint, rotated 90° to the outside
- K** - threaded joint, rotated 90° to the inside

RMAO

Stay arrangement

Assembly variants

RMAI – assembly to the inside:

standard pitch, mounting frame stay on every 4th stay, no screw fixing.

Gliding application is not possible when using assembly version RMAI.

Observe minimum KR:

H_i = 114 mm: KR_{min} = 200 mm

H_i = 139 mm: KR_{min} = 250 mm

H_i = 164 mm: KR_{min} = 300 mm

H_i = 189 mm: KR_{min} = 300 mm

RMAO – assembly to the outside:

standard pitch, mounting frame stay on every 2nd stay, screw fixing.

The cable carrier rests on the bars. A bracket must be provided for the fixed point.

Guiding in a **channel is required** for support. Please contact our technical support at technik@kabelschlepp.de to find the corresponding guide channel.

Please note the operating and installation height.

Cross section mounting frame stay

To achieve a nearly square cross section in the mounting frame stay, we recommend the following combination of B_i and H_i:

B _i [mm]	H _i [mm]	KR _{min} [mm]	Stays [mm]
125	114	200	100
150	139	250	125

Cable carrier

Universal end connectors UMB – plastic (standard)

The universal mounting brackets (UMB) are made from plastic and can be mounted **from above, from below or on the face side**.

▲ Assembly options

 Recommended tightening torque:
27 Nm for screws M8

Connection point
F - fixed point
M - driver

Connection type
U - Universal mounting bracket

Order example

 We recommend the use of strain reliefs at the driver and fixed point. See from p. 904.

TKP35 series

Robust all-rounder
with variable inner distribution

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Dividers and height partitions for cable separation
- 2 Designs with inward or outward opening cross-bars
- 3 Easy and quick to open at any position
- 4 Integrated noise damping
- 5 Interior space is gentle on the cables without sharp edges
- 6 End connectors with optional strain relief

Features

- » Robust and extremely rigid stroke system
- » Quiet operation due to internal dampening system
- » Weight-optimized cable carrier geometry
- » Interior without sharp edges, design that protects the cable
- » Variable inner distribution
- » Vertical moveable dividers or with arresting cams, can be attached at 2-mm increments (not B; 16)
- » Easy-to-open versions, left or right (not B; 16)
- » Quick and easy to open
- » Optional strain relief can be fully integrated into the end connector

Reliable cable separation through fixable dividers

Design 030 with outside opening and detachable crossbars on both sides

Design 040 with inside opening and detachable crossbars on both sides

Optimised utilisation of the interior space; vertical and horizontal inner distribution possible

Divider systems

The divider system is mounted on every 2nd chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed on the stay through rotation.

The arresting cams snap into the catch profiles in the covers (**version B**).

BASIC-LINE^{PLUS}

Solid plastic cable carriers with fixed chain widths

The product types from BASIC-LINE^{PLUS} feature pre-defined cable carrier widths and extremely fast cable laying. All combine robustness and reliability with an attractive price-performance ratio.

- » Cost-effective solutions for standard applications
- » Numerous types and designs available immediately from our warehouse
- » Cables are simply pressed/pulled into the cable carrier
- » Ideal for short travel lengths and high travel speeds
- » Very fast cable laying

Not all technical data and parameters are reached in each individual case, but are depending on the respective type of application and product configuration. Legally binding insofar as only the individual information provided for the specifically requested particular case. Please contact us - we will be happy to advise you!

Cable carrier design

Solid plastic cable carriers: chain links and end connectors made of plastic

Each chain link consists of two different materials:

- » Hard cable carrier body made of glass fiber-reinforced material
- » Flexible lamellae made of elastic plastic

The two-component technology

The two-component technology of the EasyTrax® combines two seemingly incompatible features: **stability and flexibility**.

Cable carriers need to be extremely sturdy, with extensive unsupported length. At the same time, cables need to be inserted easily for fast cable laying. The EasyTrax® meets

these requirements thanks to its innovative design and material combination of a hard cable carrier body made from fiber glass reinforced material and lamellae made of elastic plastic.

Comparison of dimensions

Manufacturer	h_i [mm]	h_G [mm]	t [mm]	Identical connection hole pattern
ET0320	18	25.5	32	yes
Competitive product	19	25	30.5	yes

Comparison of bending moment

Comparison of bending strength

Load diagram

for unsupported length depending on additional load

— ET0320
— Competitive product

Advantages over competitive product

- » 4 times bigger additional load compared to competitive product
- » Double unsupported length compared to competitive product
- » Faster cable laying at a higher utilization faktor
- » Low noise operation due to internal damping system
- » High side stability through locking in the stroke system
- » Dividers can be used for cable separation

Divider systems

The divider system is mounted on every 2nd chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed on the stay through rotation.

The arresting cams snap into the catch profiles in the covers (**version B**).

Divider system TSO without height separation

Small, light cable carriers
for modern offices

P0240 GS

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Variable fastening for table top, table frame, table foot and floor
- 2 Very long service life - no links and therefore no link wear
- 3 Different side parts / inner heights available
- 4 "Clip" side parts for attaching add-on parts
- 5 Cables are simply pressed in
- 6 Variable mounting possible via magnets, screws, adhesive pads, cable ties or integrated clip

Features

- » Solid plastic cable carrier
- » Cost savings through easy cable installation
- » Installation of pre-assembled cables also possible
- » Belt with clip-on side parts
- » Easy adaptation of the chain length
- » Low weight, good ratio between inner and outer width
- » Combination options for end connectors

Available in the standard color variants black, white, and silver gray

Cables are simply pressed in

Combination options for end connectors

Can be attached to table frames, underneath table tops or cable ducts, to rectangular or round table legs or to the floor.

Connection A/B/N – angled/oval for table top

for mounting underneath the table top, on the table frame or on the cable duct

Connection M – for profiles flat

for mounting on rectangular aluminum profiles with groove

Connection C/E + I/J – for flat frames and Connection D/F + K/L – for round frames

for mounting on the table frame (rectangular/ $\varnothing = 70$ mm) using integrated magnets **E F I K** or screws **C D J L** as short **E F C D** or long version **I K J L**

Adhesive pads are also available for optional attachment for connectors **A B** and **J**, and self-adhesive counterholder for non-magnetic surfaces for connectors **E I** and **N**. Connectors **C** and **D** can also be fixed with cable ties.

Connection G – for floor connection

for a clean transition to the floor covering

Connection H – for table base

for mounting on the table base by clipping

PROTUM OFFICE

Pitch
24 mm

Inner height
10 mm

Inner width
50 mm

This variant for office use is based on the PROTUM® cable carrier system.

With an inner width of 50 mm and cable installation on both sides, PROTUM OFFICE offers sufficient space for telecommunication, energy and data cables in modern offices.

The linkless design can blend into the environment as a

design element, e.g. with an elegant silver-grey optic.

Small, light cable carrier

- » Long service life – no links and therefore no link wear
- » Good ratio of usable space to outer dimensions
- » Easy installation by pressing in the cables
- » Easy to install and fill
- » Suitable for retrofitting
- » Clean, space-saving installation
- » Can be filled on one or both sides

Easy and fast installation

- » Connections for all smooth surfaces
- » Standard connection for table frame, round and square outside the footwell
- » Up to 4 installation options, depending on connection (magnets, screws, cable ties and adhesive tape)
- » Floor connection for sturdy positioning and floor connection

Stay variants

Design 010 page 269

Frame with lamellae in the outer radius

Side parts „Clip“ – Fixing kit for connection on both sides

Connection for installing the cable routing and attachments such as connector strips, adapters and much more. Fixing with integrated magnets or screws.

▲ Installation options

 Self-adhesive counterholder available for non-magnetic surfaces!

The fixing kit includes the belt and the side parts "Clip" for a length of 480 mm. The side parts "Clip" can be combined with the following connectors:

VARIO-LINE

Cable carriers with variable chain widths

The product types from the VARIO-LINE offer great variability for cable carrier widths and separation options within the cable carrier. This allows reliable and efficient partitioning even for complex cable configurations. Hoses and cables with larger diameters can also be accommodated and guided.

- » Aluminum stays available in 1 mm width sections
- » Plastic stays available in 4, 8 or 16 mm width sections (depending on type)
- » Easy and quick to open inside and outside
- » Light, extremely robust or linkless series
- » Cable carriers for complex applications

Features

- » Stable sidebands through robust link plate design
- » Encapsulated, dirt-resistant stroke system
- » Long service due to minimized hinge wear owing to the "life extending 2 disc principle"
- » Versions with aluminum stays available in 1 mm width sections up to 700 mm inner width
- » Versions with plastic stays available in 8 or 16 mm width sections
- » Large selection of vertical and horizontal stay separation options for your cables

Minimized hinge wear owing to the "life extending 2 disc principle"

Slide discs for long service life for applications where the carrier is rotated through 90°

Molded slide runners for long service life in sliding arrangement

Many separation options for the cables

Unsupported arrangement

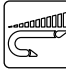

KR [mm]	H [mm]	H ₂ [mm]	L _B [mm]	U _B [mm]
75	205	245	366	168
115	285	325	492	208
145	345	385	586	238
175	405	445	680	268
220	495	535	822	313
300	655	695	1073	393

Load diagram for unsupported length depending on additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 2.5 \text{ kg/m}$. For other inner widths, the maximum additional load changes.

-  **Speed**
up to 8 m/s
-  **Acceleration**
up to 40 m/s²
-  **Travel length**
up to 4.8 m
-  **Additional load**
up to 20 kg/m

Gliding arrangement

-  **Speed**
up to 2 m/s
-  **Acceleration**
up to 3 m/s²
-  **Travel length**
up to 220 m
-  **Additional load**
up to 20 kg/m

 The gliding cable carrier must be guided in a channel. See p. 844.

If the cable carrier is positioned so it is rotated by 90° (gliding on the outside of the side band), slide discs snapped onto the side optimize the friction and wear situation.

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS – half-stayed).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping on a socket (available as an accessory).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

This socket additionally acts as a spacer between the dividers and is available in a 1 mm grid between 3 – 50 mm. The inner height is reduced to 32 mm (**version B**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	6.5	13	10	2

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Assembly variants

RMAI – assembly to the inside:

Gliding application is not possible when using assembly version RMAI.

Observe minimum KR:

$H_i = 130 \text{ mm}; KR_{\min} = 175 \text{ mm}$

$H_i = 160 \text{ mm}; KR_{\min} = 220 \text{ mm}$

$H_i = 200 \text{ mm}; KR_{\min} = 300 \text{ mm}$

RMAO – assembly to the outside:

The cable carrier has to rest on the side bands and not on the stays.

Guiding in a **channel is required** for support.

Please contact our technical support at technik@kabelschlepp.de to find the corresponding guide channel.

Please note the operating and installation height.

Subject to change without notice.

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS – half-stayed).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping on a socket (available as an accessory).

The socket additionally serves as a spacer between the dividers and is available in 1 mm sections between 3 – 50 mm. The inner height is reduced to 54 mm (**version B**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	7	14	10	2

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _T max [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	7	25	14	10	2

The dividers can be moved in the cross section.

Divider system TS2 with partial height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	7	23	19	2

With grid distribution (1 mm grid). The dividers are attached by the height separation, the grid can be moved in the cross section.

Sliding dividers are optionally available (thickness of divider = 4 mm).

Please note that the real dimensions may deviate slightly from the values indicated here.

- 11 C-rail for strain relief elements

Features

- » Four designs: closed, and openable to the inner or outer side or to both sides
- » Good ratio of inner to outer width
- » Easy assembly and fast cable laying
- » UMB connectors made of sturdy plastic (strengths comparable to aluminium)
- » Low-wear, cable-friendly design with smooth surface
- » Polygon-optimized bending radii for smooth and low-wear chain running

Replaceable glide shoes - optionally with automatic wear monitoring

UMB connectors made of sturdy plastic (strengths comparable to aluminium)

Lateral wear surfaces - for long service life for applications where the carrier is rotated through 90°

Rear grips at stopper for better force transmission and higher strengths

Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 3.85 \text{ kg/m}$ with B_i 196 mm. For other inner widths, the maximum additional load changes.

- Speed**
up to 10 m/s
- Acceleration**
up to 25 m/s²
- Travel length**
up to 9 m
- Additional load**
up to 50 kg/m

VS Stay arrangement

Divider systems

The divider system is mounted on every 2nd chain link as a standard.

For applications with lateral acceleration and lying on the side, the dividers can be attached by a fixing profile, available as an accessory (**version B**). The fixing profile must be installed at the factory.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

Divider systems

As a standard, the divider system is mounted on each crossbar – for stay mounting on every 2nd chain link (HS).
As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping on to a socket (available as an accessory).
The bushing additionally serves as a spacer between the dividers and is available in 1 mm sections between 3 – 50 mm. The inner height is reduced to 32 mm (**version B**).

Divider system TSO without height separation

Aluminum stay RV – frame stay reinforced

- Aluminum profile bars with plastic adapter for medium to high loads and large cable carrier widths. Assembly without screws.
- Available customized in **1 mm grid**.
- **Outside/inside:** release by turning by 90°.

Stay arrangement on every 2nd chain link, **standard (HS: half-stayed)**

Stay arrangement on each chain link (**VS: fully-stayed**)

1 mm B_i 75 – 500 mm in **1 mm width sections**

The maximum cable diameter strongly depends on the bending radius and the desired cable type. Please contact us.

For rough environmental conditions, we recommend the use of OFFROAD glide shoes with 80 % higher wear volume.

Calculating the cable carrier length

Cable carrier length L_k

$$L_k \approx \frac{L_s}{2} + L_B$$

Cable carrier length L_k rounded to pitch t

Assembly variants

RMAI – assembly to the inside:

Gliding application is not possible when using assembly version RMAI.

Observe minimum KR:

$H_i = 130 \text{ mm}; KR_{\min} = 170 \text{ mm}$

$H_i = 160 \text{ mm}; KR_{\min} = 200 \text{ mm}$

$H_i = 200 \text{ mm}; KR_{\min} = 260 \text{ mm}$

RMAI – assembly to the outside:

The cable carrier has to rest on the side bands and not on the stays.

Guiding in a **channel is required** for support.

Please contact our technical support at technik@kabelschlepp.de to find the corresponding guide channel.

Please note the operating and installation height.

Divider systems

As a standard, the divider system is mounted on each crossbar – for stay mounting on every 2nd chain link (HS).

As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

The dividers are easily attached to the stay for applications with lateral acceleration and for applications laying on their side by simply turning the frame stay by 180°. The arresting cams click into place in the locking grids in the crossbars (**version B**).

The groove in the frame stay faces outwards.

Divider system TS0 without height separation

Vers.	a_T min [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5.5	14.5	8.5	–	–
B	6.5	16	10	16	–

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS1 with continuous height separation

Vers.	a_T min [mm]	a_T max [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5.5	25	14.5	8.5	–	2
B	6.5	25	16	10	16	2

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS2 with partial height separation

Vers.	a_T min [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5.5	14.5/21	8.5/15	–	2
B	6.5	16/32	10/26	16	2

* for VR0

With grid distribution (16 mm grid). The dividers are attached by the height separation, the grid can be moved in the cross section (version A) or fixed (version B).

340	776	826	1319	513
380	856	906	1444	553
500	1096	1146	1821	673

Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 4.5 \text{ kg/m}$. For other inner widths, the maximum additional load changes.

Speed
up to 10 m/s

Acceleration
up to 25 m/s²

Travel length
up to 9.7 m

Additional load
up to 65 kg/m

Gliding arrangement | GO module with chain links optimized for gliding

KR [mm]	H [mm]	GO module RKR [mm]	L _B [mm]	U _B [mm]
180	288	500	2000	930
220	288	500	2250	1015
260	288	500	2500	1095
300	288	500	2750	1177
340	288	500	3125	1318
380	288	500	3375	1403
500	288	500	4375	1770

Speed
up to 8 m/s

Acceleration
up to 20 m/s²

Travel length
up to 320 m

Additional load
up to 65 kg/m

The gliding cable carrier must be guided in a channel. See p. 844.

The GO module mounted on the driver is a defined sequence of 4 adapted KR/RKR link plates.

Glide shoes have to be used for gliding applications.

Divider systems

As a standard, the divider system is mounted on each crossbar – for stay mounting on every 2nd chain link (HS).
As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping on a socket (available as an accessory).
The bushing additionally serves as a spacer between the dividers and is available in 1 mm sections between 3 – 50 mm (**version B**).

 HS Stay arrangement

Divider systems

As a standard, the divider system is mounted on each crossbar – for stay mounting on every 2nd chain link (HS).

As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

The dividers are easily attached to the stay for applications with lateral acceleration and for applications laying on their side by simply turning the frame stay by 180°. The arresting cams click into place in the locking grids in the crossbars (**version B**).

The groove in the frame stay faces outwards.

Divider system TS0 without height separation

Vers.	a_T min [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5	14.5	6.5	—	—
B	19.5	16	8	16	—

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS1 with continuous height separation

Vers.	a_T min [mm]	a_T max [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5	25	14.5	6.5	—	2
B	19.5	19.5	16	8	16	2

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS2 with partial height separation

Vers.	a_T min [mm]	a_x min [mm]	a_c min [mm]	a_x grid [mm]	n_T min
A	5	14.5*20	6.5*12	—	2
B	19.5	16*32	8*24	16	2

* for VR0

With grid distribution (**16 mm grid**). The dividers are fixed by the height separation, the complete divider system is movable in the cross section (version A) or fixed (version B).

Divider system TS3 with height separation made of plastic partitions

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	4	16 / 42*	8	2

* For aluminum partitions

The dividers are fixed by the partitions, the complete divider system is movable in the cross section.

Aluminum partitions in 1 mm increments with **a_x > 42 mm** are also available.

a _x (center distance of dividers) [mm]											
a _c (nominal width of inner chamber) [mm]											
16	18	23	28	32	33	38	43	48	58	64	68
8	10	15	20	24	25	30	35	40	50	56	60
78	80	88	96	112	128	144	160	176	192	208	
70	72	80	88	104	120	136	152	168	184	200	

When using **plastic partitions with a_x > 112 mm**, we recommend an additional center support with a **twin divider** (S_T = 4 mm). Twin dividers are also suitable for retrofitting in the partition system.

Universal end connectors UMB – plastic (standard)

The universal mounting brackets (UMB) are made from plastic and can be mounted **from the top, from the bottom, face on or from the side.**

Recommended tightening torque: 54 Nm for cheese-head screws ISO 4762 - M10 - 8.8

End connectors – plastic/steel

Plastic link end connector, steel end connector. The connection variants on the fixed point and on the driver can be combined and, if required, changed afterwards.

Assembly options

Connection point

- F – fixed point
- M – driver

Connection type

- U – universal mounting bracket

Connection point

Light, extremely quiet and
low-vibration for high speeds
and accelerations

Fraunhofer

TESTED®
DEVICE
KABELSCHLEPP GmbH
© 2016, 27. April 2016
Report No. KA 0008-183

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Universal end connectors (UMB)
- 2 Aluminum stays available in **1 mm width sections**
- 3 Aluminum stays in reinforced design
- 4 Plastic stays available in **8 or 16 mm width sections**
- 5 Can be opened quickly on the inside and the outside for cable laying
- 6 Fixable dividers
- 7 Replaceable glide shoes
- 8 Strain relief combs
- 9 C-rail for strain relief elements

Virtually no polygon effect

QUANTUM®
Low-vibration operation

Cable carrier with polygon effect

Features

- » Cleanroom compatible: no links, no link wear
- » Extremely quiet, 31 db (A)*
- » Extremely light
- » For high accelerations up to 300 m/s^2
- » For high operating speeds up to 40 m/s
- » Extremely long service life: ≥ 25 million motion cycles
- » TÜV type tested as per 2PfG 1036/10.97
- » Large selection of stay systems and separating options for cables

* Tested: Q060.100.100 by TÜV Rheinland. The sound pressure level for the measured area was measured at a distance of 0.5 m for smooth and jerky movements.

Ideal for highly dynamic applications

3D movements: the driver connection can be moved laterally and can be rotated by up to $\pm 30^\circ$

Side bands made from special plastic and steel cables in the support floor for an extremely long service life

QUANTUM® series											

Cleanroom compatible and long service life

Continuous side bands are used. In contrast to conventional hole-and-bolt connections, hardly any wear occurs (link abrasion), which makes QUANTUM® ideal for use in cleanrooms.

Extremely long service life through

- » No link abrasion due to absence of hole-and-bolt connections
- » Continuous side bands made from special plastic with integrated steel cables

Ideal for highly dynamic applications – extruded side bands

The QUANTUM® runs extremely quietly and with low vibrations. The absence of links and the very small pitch means that the so-called polygon effect is reduced to a minimum. Due to the very quiet running, the QUANTUM® cable carrier system is ideal for applications with low-vibration linear drives.

Divider systems

The divider system is mounted on each crossbar as a standard – on every 6th section for stay mounting (HS). As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed by turning the frame stay by 180°. The arresting cams click into place in the locking grids in the crossbar (**version B**). The groove in the frame stay faces outwards.

Divider system TSO without height separation

Divider systems

The divider system is mounted on each crossbar as a standard – on every 8th section for stay mounting (HS). As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°. the dividers can be attached by simply clipping onto a socket (available as an accessory).

This socket additionally acts as a spacer between the dividers and is available in a 1 mm grid between 3 – 50 mm, as well as 16.5 and 21.5 mm (**version B**).

Divider system TS0 without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	11	14	10	2

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _T max [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	11	25	14	10	2

The dividers can be moved in the cross section.

Divider system TS2 with partial height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	11	23	19	2

With grid distribution (1 mm grid). The dividers are attached by the height separation, the grid can be moved in the cross section.

Sliding dividers are optionally available (thickness of divider = 4 mm).

Please note that the real dimensions may deviate slightly from the values indicated here.

Cleanroom compatible and long service life

The movable connectors are directly molded on the chain links. In contrast to conventional bore-hole bolt connections, hardly any wear occurs (link abrasion), which makes the TKR type excellent for use in clean rooms.

The special design of the connecting elements additionally increases the service life of the system.

TUBES-PLASTIC

Covered solid plastic and hybrid cable carriers

These covered product types ensure optimum protection of the cables and hoses against chips and other dirt. Variable separations within the cable carrier allow reliable and efficient partitioning. Hoses and cables with larger diameters can also be accommodated and guided.

- » Covered cable carriers with plastic or aluminum cover systems
- » Aluminum cover systems in 1 mm width sections
- » To protect cables and hoses against chips or dirt
- » Easy and quick to open inside and outside

tsubaki-kabelschlepp.com/trademarks

Stilfact - made without glue

- 1 End connectors with optional strain relief
- 2 Interior gentle on the cables without projecting edges
- 3 Integrated noise damping
- 4 Dividers and height separations for separating the cables
- 5 Quick and easy opening from any position
- 6 Secure cover attachment even under severe stresses (e.g. from hydraulic lines)
- 7 Chain links made of glass-fiber reinforced plastic
- 8 Bolt/hole connection and stroke system covered completely
- 9 Designs with inward or outward opening cross-bars
- 10 Covers completely detachable on one side
- 11 Cover sheet for universal end connectors

Features

- » Excellent cable protection in the connector area
- » Chip and dirt resistant due to smooth surfaces
- » Extensive unsupported length
- » High torsional rigidity
- » Low noise emission
- » Numerous custom material types for custom applications available
- » Easy-to-open cover with simultaneously high retention force on the chain link during operation
- » Measurement scale for easy alignment of the dividers
- » TKA55: IP54 tested and certified*

Optimized utilization of the interior space; vertical and horizontal inner distribution possible

Easy-open covers from any position offer secure fastening

Triple-stroke system for extensive unsupported length

Universal end connector with option for integrating strain relief elements

Divider systems

As a standard, the divider system is mounted on every 2nd chain link.

As a standard, dividers, or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

The dividers are easily attached to the stay for applications with transverse accelerations and for applications laying on the side by simply turning them.

The locking cams click into place in the locking grids in the covers (**version B**).

Extreme cable protection in harsh environmental conditions

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH as a national or international registration in the following countries: tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- 1 Connectors with optional strain relief
- 2 Completely detachable covers
- 3 Easy and quick to open
- 4 Gentle on the cables – interior space without projecting edges
- 5 Dividers and height separations for cable separation
- 6 Designs with outward opening covers
- 7 Secure hold of the covers also under heavy load (e.g. by the use of hydraulic cables)
- 8 Chain links made of plastic
- 9 Extensive unsupported length
- 10 Very quiet thanks to integrated noise damping system
- 11 Cover system also in the connection

Features

- » outstanding protection for the cables
- » quick cable laying – outside opening designs
- » very quiet thanks to internal noise damping system
- » large unsupported length
- » high-quality visual design
- » for unsupported and gliding arrangements
- » sliding surfaces with wear volume integrated in the inner cover

Simply unlock cover with a screwdriver

Detach the cover from the chain link

Divider system TS1

Optional strain relief comb – also placed on top of one another

Divider system TS3 with height separation made of plastic partitions

Vers.	a_T min [mm]	a_x min [mm]	a_c min [mm]	n_T min
B	6,5	16 / 42*	8	2

* For aluminum partitions

The dividers are fixed by the partitions, the complete divider system is movable in the cross section.

Aluminum partitions in 1 mm width sections with $a_x > 42$ mm are also available.

a_x (center distance of dividers) [mm]												
a_c (nominal width of inner chamber) [mm]												
16	32	48	64	80	96	112	128	144	160	176	192	208
8	24	40	56	72	88	104	120	136	152	168	184	200

When using **plastic partitions with $a_x > 112$ mm**, we recommend an additional center support with a **twin divider** ($S_T = 4$ mm). Twin dividers are also suitable for retrofitting in the partition system.

Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 13 \text{ kg/m}$. For other inner widths, the maximum additional load changes.

Speed
up to 4 m/s

Acceleration
up to 25 m/s²

Travel length
up to 11.75 m

Additional load
up to 65 kg/m

Gliding arrangement

Speed
up to 2 m/s

Acceleration
up to 2-3 m/s²

Travel length
up to 350 m

Additional load
up to 65 kg/m

 The gliding cable carrier must be guided in a channel. See p. 844.

We recommend the use of glide shoes for gliding applications.

Aluminum stay RMD – aluminum cover system

- » Bolted aluminum covers for maximum stability
- » For applications generating swarf or coarse contamination
- » Available customized in **1 mm grid**.

Stay arrangement

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	6	25	17	-

The dividers can be moved in the cross section.

Divider system TS3 with height separation consisting of plastic partitions

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	n _T min
A	1	16 / 42*	8	2

* For aluminum partitions

The dividers are fixed with the partitions. The entire divider system can be moved in the cross section.

Aluminum partitions in 1 mm increments with a_x > 42 mm are also available.

a _x (center distance of dividers) [mm]											
a _c (nominal width of inner chamber) [mm]											
16	18	23	28	32	33	38	43	48	58	64	68
8	10	15	20	24	25	30	35	40	50	56	60
78	80	88	96	112	128	144	160	176	192	208	
70	72	80	88	104	120	136	152	168	184	200	

When using plastic partitions with a_x > 112 mm, we recommend an additional center support with a twin divider (S_T = 5 mm). Twin dividers are also suitable for retrofitting in the partition system.

Cable carriers for 3D applications

ROBOTRAX®
System

Multidimensional rotation and swivel motions require cable carriers that follow the movements reliably while securely guiding and protecting cables and hoses. The cable carriers from the 3D-Line combine these special characteristics and are therefore particularly suitable for applications in robotics and automation.

FLATVEYOR®

- » Ideal for maximum freedom of movement for 3D applications
- » Three-dimensional swivel and rotation movements, for example on robots for use from robot base to robot wrist
- » Extending the service life of cables in 3D applications through defined minimum bending radius and separation and guiding of the cables
- » For extremely high tensile forces and accelerations

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

1 Steel cable for transferring extremely high tensile forces

2 Tension piece for locking the chain links

3 Type with toolless opening swivel crossbars and divider module available

4 Open design

- Fast cable laying as the cables are simply pressed in

- Easy checking of all cables

5 Special plastic for long service life

6 Protective covers or heat shields made from different materials are available for different environmental conditions

7 Quick-release bracket for fixing and continuation

8 Strain relief with LineFix clamps

9 Protection against hard impacts, excessive abrasion and premature wear as well as limitation of the bending radius through protector

Features

- » Suitable for three-dimensional swivel and rotation movements
- » Ideal for a long service life of the cables:
 - The bending radius does not fall below the minimum when using protectors
 - The cables can be separated in three chambers
- » Also ideal for turntables

Swiveling crossbars and divider module (R140X)

Active return mechanism with the PBU pull back unit (R040 - R100)

Fast cable laying by simply pressing in the cables (R040 - R100)

Chain links single part

The basic structure of ROBOTRAX® consists of plastic links. These have spherical snap-on connections on both sides. This allows the individual links to be snapped together to form a cable carrier.

Protectors ensure that the bending radius does not fall below the minimum in any direction. The links can be rotated in the radial direction (see table values). The cables can be separated in three chambers.

Dimensions

Type	t [mm]	KR [mm]	Radial rotation possible on 1 m length [°]	d* [mm]	Number of links per m
R040	21.5	70 [75]	± 450	2 - 8.5	47

TRAXLINE®

Mounting kit

Fast movements of the robot arms generate high accelerations and therefore high tensile forces on the cable carrier.

To transfer these tensile forces, ROBOTRAX® has a hole at the center of each chain link through which the steel cable is pulled. This steel cable takes on the function of force transmission.

The steel cable is fixed with a clamping piece on one side. ROBOTRAX® permits accelerations up to 10 g.

The clamping piece can be used to easily set the chain links to the desired tension and adjust them at any time.

Long service life of the cables and hoses:

The forces are primarily transmitted by the cable carrier and not by cables and hoses.

The mounting set consists of steel cable, clamping and tension piece for up to 5 m cable carrier length.

Quick-release brackets

The ROBOTRAX® is fixed and continued with quick-release brackets which are attached with screws. The quick-release brackets fit on any chain link of the respective size. This means the fixing points can be individually adjusted to the motion sequence.

Locking bolt:

100% recyclable, cost-effective locking bolt, optimized for installation space and environment. The bolt can be assembled and disassembled without tools.

(Also available as a screwed version)

Accessories

TRAXLINE®

PBU pull back unit

(for types R040, R056, R075, R085 and R100)

Please state the number, robot type and type series when ordering.

PBU: With fast movement sequences and large work envelopes, the relatively long carriers knock against the robot arm. The repeated impact significantly reduces the service life of the cable carrier and the cables within, and the entire system can fail. Downtimes cause high costs and problems in the manufacturing process – so they have to be avoided.

- » Compact design: fewer interfering contours and lower risk of collision
- » Maximum flexibility for cable carrier routing
- » No maintenance on the retraction element required
- » Standard mounting for KUKA, ABB and FANUC

PBU is available for new robots, regardless of size, manufacturer, type or application, as well as retrofits and upgrades for existing workcells. It can be mounted vertically, horizontally or upside down. The extension length of the LSH 3 is 350 mm.

	R040	R056	R075	R085	R100
H_z [mm]	187	187	221	221	268
Type	Fotensile forces F [N]				
PBU Light	40.0				
PBU Standard	80.0				
PBU Heavy	110.0				

Protector

The service life of the cable carriers and cables is significantly reduced by impact during fast movement sequences and in large work envelopes. The Protector protects the cable carrier against hard impacts, excessive abrasion and premature wear, while also acting as a limitation for the smallest bending radius. Downtimes are minimized. Not the entire cable carrier has to be replaced, but only the Protector in some cases.

Please state the desired type series and quantity when ordering.

Turntable for quick-release bracket

One additional degree of freedom on the attachments points. When mounted on a turntable, the quick-release bracket can rotate as well, to offer increased flexibility during complex robot movements.

- » Cable replacement does not require changing the complete system
- » Quiet
- » Compact & lightweight
- » Specifications can be determined easily and quickly

Easy replacement of cables and hoses

Clean class equivalent to ISO class 2

Available in black or white

FLATVEYOR® ZP

FLATVEYOR® ZP combines the advantages of a FLATVEYOR (flat cable system) with the structure of a cable carrier. FLATVEYOR® ZP reduces the downtime and improves the productivity. Users benefit from a simple replacement process for cables and hoses. In addition, existing cables and hoses can be installed, which reduces costs and provides more sustainability in procurement. There is no need to replace the entire system.

FLATVEYOR® ZP is a free-standing flat cable system with internal support members to keep straight movement with a high speed.

No hopping, No sagging, No falling over sideways!

The support members act as reliable guides which can be moved in one direction along the intended minimum bending radius, whereby the cables and tubes are guided reliably.

About the openable tubes

- » TSUBAKI KABELSCHLEPP's original tube with excellent flexibility, durability and smoothness
- » Zip structure is a very flexible to open and close, but does not open when moving due to the high durability by our original tube
- » 2 Support members with both sides + openable tubes
- » Openable tubes: Selection is available from 1 to 8
- » Color: White or black is a standard model color

- 3 Air tubes, based on your specifications
- 4 Clamp: will select suitable clamp, based on your specifications
- 5 Support members: on both internal sides of Pods for a free-standing guiding

Features

- » Cleanroom IPA ISO Class 1 certified
- » Solve particle issues generated from the friction of cable carriers and cables
- » Usable with long travel strokes
- » Quiet
- » High speed operation
- » Line up cables with excellent flexibility and elasticity
- » Fast installation due to preassembled complete system
- » High durability with over 10 million bending cycles

No friction due to the use of pods

Cleanroom IPA ISO Class 1 certified

High travel speed: up to 2 m/sec

CLEANVEYOR®

CLEANVEYOR® is an extremely top-class solution with a free-standing guiding system that makes full use of our

cable carrier technology and experience.

Maximum purity and hygiene!

It comes as no surprise that clean rooms, processes and products are a must! Because any contamination leads to costly incidents, scrap or useless laboratory results.

CLEANVEYOR® can contribute to lowering total costs, to lead reduction of defective products.

Layering example

CLEANVEYOR® supports a multi-layer structure with up to 6 layers.

Steel cable carriers for extreme applications

Special applications require the use of special cable carriers. Our steel and stainless steel cable carriers are ideal for extreme heat or other very rough ambient conditions, such as in mining, smelting or oil production. Standardized separating options offer best possible protection for cables and hoses even under strong mechanical strain.

- » Robust design for strong mechanical strain
- » High additional loads and extensive unsupported lengths possible
- » Ideal for extreme and rough ambient conditions
- » Heat-resistant

**LS series**

Side bands made of hardened steel as a standard

LSX series

Side bands made of steel resistant to rust and acid

STEEL
SPECIAL COATED

STAINLESS STEEL
RUST-FREE

- 1 All stays available in **1 mm width sections**
- 2 4-fold bolted aluminum stays for extreme loads
- 3 Rolling stays
- 4 Aluminum hole stays

- 5 Mounting frame stays
- 6 Stops integrated into link plate - no additional bolts required
- 7 Different separation options for the cables
- 8 Plastic or steel dividers

- 9 Weight-optimized side bands made of hardened steel or stainless steel
- 10 Optional center bolt for applications with high loads

- 11 Good ratio of inner to outer width - no end divider required
- 12 End connectors for different connection variants

Features

- » Weight-optimized one-part link plate design
- » Better value than comparable steel cable carriers
- » Significantly higher unsupported lengths compared to plastic cable carriers of a similar size
- » Integrated radius and pre-tension stops - in a good value design
- » Bolted stay systems, solid end connectors
- » Cover with steel band available on request
- » Also possible as a double band solution
- » Good corrosion resistance

The design

The weight-optimized link plate design makes the cable carriers very light yet highly sturdy. For the LS series, the unsupported length is significantly higher compared to plastic cable carriers of a similar size.

Weight-optimized link plates consist of only one plate - the stop system is integrated

Lightweight side bands with-out additional bolts - hardened steel or stainless steel

Optional: Center bolts and circlip for applications with high loads

Optional: C-rail for strain relief elements attached in the connection

Sturdy and durable, even under extreme conditions

Double-band steel cable carrier LS1050

- » Up to 40% longer unsupported lengths compared to LS1050 with standard side band with the same additional load, as part of the load diagram
- » Very high additional loads: up to 40 kg/m possible
- » Long service life even with high dynamic loads
- » High travel speeds

Longer service life through hardened side bands

The hardened surface significantly increases the service life of the LS1050. Tests were carried out on cable carriers with identical designs.

The LS1050 is therefore ideal for applications with many travel cycles, for example in 3-shift operation.

Divider systems

As a standard, the divider system is mounted on each crossbar – for stay mounting on every 2nd chain link (HS).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping on a socket (available as an accessory).

As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

The socket additionally serves as a spacer between the dividers and is available in 1 mm sections between 3 – 50 mm as well as 16.5 and 21.5 mm (**version B**).

Divider system TS0 without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	7	14	10	-

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _T max [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	7	25	14	10	2

The dividers can be moved in the cross section.

Divider system TS2 with partial height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	7	23	19	2

With grid distribution (1 mm grid). The dividers are attached by the height separation, the grid can be moved in the cross section.

Sliding dividers are optionally available (thickness of divider = 4 mm).

Please note that the real dimensions may deviate slightly from the values indicated here.

Intrinsic cable carrier weight

Determining the intrinsic cable carrier weight strongly depends on the selected stay arrangement. Please contact us.

Assembly variants

RMA 1 – assembly to the inside:

Gliding application is not possible when using assembly version RMA 1.

Observe minimum KR:

$H_i = 130 \text{ mm}; KR_{\min} = 195 \text{ mm}$

$H_i = 160 \text{ mm}; KR_{\min} = 260 \text{ mm}$

$H_i = 200 \text{ mm}; KR_{\min} = 260 \text{ mm}$

RMA 2 – assembly to the outside:

The cable carrier has to rest on the side bands and not on the stays.

Guiding in a **channel is required** for support. Please contact our technical support at technik@kabelschlepp.de to find the corresponding guiding channel.

Please note the operating and installation height.

Subject to change without notice.

End connectors - steel

End connectors made of steel. The connection variants on the fixed point and on the driver can be combined and, if required, changed afterwards.

▲ Assembly options

Connection point

- F** - fixed point
- M** - driver

Connecting surface

- A** - connecting surface outside
- I** - connecting surface inside

Connection type

- A** - threaded joint outside (standard)
- I** - threaded joint inside

Order example

 We recommend the use of strain reliefs before driver and fixed point. See from p. 904.

S series
Side bands made of galvanized steel

SX series
Side bands made of steel resistant to rust and acid

STEEL
ZINC-PLATED

STAINLESS STEEL
RUST-FREE

Features

- » Extremely robust, sturdy steel cable carriers for heavy mechanical loads and rough environmental conditions
- » Side bands made of galvanized steel (S series) or corrosion-resistant and acid-resistant steel (SX series) in three qualities: ER 1/ ER 1S and ER 2
- » Very sturdy link plates, each consisting of two individual plates
- » Very extensive unsupported lengths even with large additional loads
- » Bolted stay systems, solid end connectors
- » Joint design with multi stroke system and hardened bolt
- » Explosion protection with classification EX II 2 GD as per ATEX RL

The design

Proven steel cable carriers with extremely sturdy link plates and dedicated joint design with multi stroke system and hardened bolt. The extremely sturdy design allows extensive unsupported lengths and high possible additional loads.

Sandwich design:
Link plates consist of two plates

Glide shoes available for gliding applications

Stroke system with hardened bolt and circlips

Also available as covered variants with cover system or steel band cover, p. 802 and p. 916

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping onto a socket (available as an accessory).

This socket additionally acts as a spacer between the dividers and is available in a 1 mm grid between 3 – 50 mm, as well as 16.5 and 21.5 mm (**version B**).

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and rotated by 90°, the dividers can be attached by simply clipping onto a socket (available as an accessory).

The socket additionally acts as a spacer between the dividers and is available in 1 mm increments between 3 – 50 mm (**version B**).

We recommend the use of strain reliefs at the driver and fixed point. See from p. 904.

Special designs

S/SX1252 – with closed stroke system and straight link plates

- » Closed stroke system protected between link plates mounted on both sides.
- » Symmetrical side band design.
- » Long service life even under the toughest conditions, e.g. large amounts of foundry sand, emery or scale thanks to optimized cable carrier geometry.

S/SX1252 B – with internal stroke system and straight link plates

- » Open stroke system.
- » Link plates of the side bands are mounted offset.
- » Long service life even under the toughest conditions, e.g. large amounts of foundry sand, emery or scale thanks to optimized cable carrier geometry.
- » The optimized, "self-cleaning" geometry prevents blocking of the stops through dirt.
- » Version with bolted side bands.

TRAXLINE® cables for cable carriers

Hi-flex electric cables which were especially developed, optimized and tested for use in cable carriers can be found at tsubaki-kabelschlepp.com/traxline

S/SX1800

Pitch
180 mm

Inner height
104 – 110 mm

Chain widths
180 – 1000 mm

Bending radii
265 – 1300 mm

Stay variants

Aluminum stay RM..... page **746**

Frame stay, solid

- » Aluminum profile bars for heavy loads and maximum cable carrier widths. Double threaded joint on both sides "**Heavy Duty**".
- » **Inside/outside:** Threaded joints easy to release.

Aluminum stay RR..... page **748**

Frame stay, tube version

- » Steel rolling stays with gentle cable support and steel dividers. Ideal for using media hoses with soft sheathing.
- » **Inside/outside:** Screw connection detachable.

Aluminum stay LG..... page **750**

Frame stay, split

- » Optimum cable routing in the neutral bending line. Split version for easy cable routing. Stays also available unsplit.
- » **Inside/outside:** Threaded joint easy to release.

S/SX tubes

Also available as covered variants with cover system or steel band cover. More information can be found in chapter "S/SX tubes" from p. 802.

Unsupported arrangement

KR [mm]	H [mm]	L _B [mm]	U _B [mm]

Divider systems

The divider system is mounted on each crossbar as a standard – on every 2nd chain link for stay mounting (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	Π _T min
A	21.5	25	17.5	–

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	Π _T min
A	21.5	25	17.5	2

The dividers can be moved in the cross section.

Divider system TS3 with height separation consisting of plastic partitions

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	Π _T min
A	11.5	16 / 42*	8	2

* For aluminum partitions

The dividers are fixed with the partitions. The entire divider system can be moved in the cross section.

Aluminum partitions in 1 mm width increments with a_x > 42 mm are also available.

a _x (center distance of dividers) [mm]											
a _c (nominal width of inner chamber) [mm]											
16	18	23	28	32	33	38	43	48	58	64	68
8	10	15	20	24	25	30	35	40	50	56	60
78	80	88	96	112	128	144	160	176	192	208	
70	72	80	88	104	120	136	152	168	184	200	

When using plastic partitions with a_x > 112 mm, we recommend an additional center support with a twin divider (S_T = 4 mm). Twin dividers are also suitable for retrofitting in the partition system.

End connectors - steel

End connectors made of steel. The connection variants on the fixed point and on the driver can be combined and changed later on, if necessary.

▲ Assembly options

Connection point

F - fixed point
M - driver

Connection type

A - threaded joint to outside (standard)
I - threaded joint to inside
H - threaded joint, rotated 90° to the outside
K - threaded joint, rotated 90° to the inside

Connection surface

I - connection surface inside (standard)
A - connection surface outside

Caution: The standard connection variant FAI/MAI is only possible from B_k of 139 mm.

Order example

We recommend the use of strain reliefs at the driver and fixed point. See from p. 904.

Special designs

S/SX1802 – with closed stroke system and straight link plates

- » Closed stroke system protected between link plates mounted on both sides.
- » Symmetrical side band design.
- » Long service life even under the toughest conditions, e.g. large amounts of foundry sand, emery or scale thanks to optimized cable carrier geometry.

S/SX1802 B – with internal stroke system and straight link plates

- » Open stroke system.
- » Link plates of the side bands are mounted offset.
- » Long service life even under the toughest conditions, e.g. large amounts of foundry sand, emery or scale thanks to optimized cable carrier geometry.
- » The optimized, "self-cleaning" geometry prevents blocking of the stops through dirt.
- » Version with bolted side bands.

Custom sizes

For over 65 years, TSUBAKI KABELSCHLEPP has been developing and manufacturing steel cable carriers which are used in a great variety of applications, from steel works and shipbuilding to offshore oil rigs. We comply with the required quality and industry standards and are happy to develop customized solutions for your individual projects. We can manufacture special sizes in different materials as per your requirements.

- » Individual problem solutions from an experienced engineering team
- » Maintenance-free systems with a high level of reliability and availability
- » Different materials adapted to the area of application
- » Resistant to temperature, corrosion, chemicals and UV
- » Suitable for use with salt water
- » Explosion protection with classification EX II 2 GD as per ATEX RL
- » Linear and rotating travel paths possible
- » Easy and flexible assembly with modular design
- » Cable weights of over 1000 kg/m possible
- » Long service life

TSUBAKI KABELSCHLEPP technical support

If you have any questions about the configuration of cable carriers or other technical details please contact our technical support at technik@kabelschlepp.de. We will be happy to help you.

TUBES-STEEL

Covered steel cable carriers for extreme applications

Special applications require the use of special cable carriers. Our steel and stainless steel cable carriers are the first choice for extreme heat or other very rough ambient conditions, such as in mining, smelting or oil production. Customized separating options offer best possible protection for cables and hoses even under high mechanical loads.

- » Robust design for high mechanical loads
- » High additional loads and extensive unsupported lengths possible
- » Ideal for extreme and rough ambient conditions
- » Heat-resistant

Subject to change without notice.

STEEL
ZINC-PLATED

STAINLESS STEEL
RUST-FREE

S series
Side bands made of galvanized steel

SX series
Side bands made of steel resistant to rust and acid

- 1 Aluminum covers available in **1 mm width sections**
- 2 4 bolted aluminum covers for extreme loads
- 3 Joint design with hardened bolts for long service life
- 4 Cranked link plate design
- 5 Can be opened on the inside and the outside for cable laying
- 6 Different separation options for the cables
- 7 Extremely robust side bands, galvanized or stainless steel
- 8 Steel band cover available in **1 mm width sections**
- 9 Replaceable glide shoes
- 10 End connectors for different connection variants

Features

- » Extremely robust, sturdy steel cable carriers for heavy mechanical loads and rough environmental conditions
- » Side bands made of galvanized steel (S series) or corrosion-resistant and acid-resistant steel (SX series) in three qualities: ER 1 / ER 1S and ER 2
- » Very sturdy link plates, each consisting of two individual plates
- » Very extensive unsupported lengths even with large additional loads
- » Joint design with multi stroke system and hardened bolt
- » Bolted stay systems, solid end connectors
- » Explosion protection with classification EX II 2 GD as per ATEX RL

The design

Proven steel cable carriers with extremely sturdy link plates and dedicated joint design with multi stroke system and hardened bolt. The extremely sturdy design allows extensive unsupported lengths and high possible additional loads.

Sandwich design:
Link plates consist of two plates

Glide shoes available for gliding applications

Stroke system with hardened bolt and circlips

Also available as open variants with different stay variants, p. 718

Height separation

Please state the designation of the divider system (**TS0, TS1...**), version and number of dividers per cross section [n_T].

If using divider systems with height separation (**TS1**) please also state the positions [e.g. VDI] viewed from the left driver belt. You are welcome to add a sketch to your order.

The end dividers are part of the divider system and don't have to be ordered separately.

Divider systems

As a standard, the divider system is mounted on every 2nd cover/chain link (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

Divider system TS0 without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	17.5	20	15	-

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	10	12	8	2

The dividers can be moved in the cross section.

Divider system TS2 with partial height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	11*/17**	14*/21	8*/15	2

* For VR0 ** For version with height separation to the end divider

With grid distribution (1 mm grid). The dividers are attached by the height separation, the grid can be moved in the cross section.

Sliding dividers are optionally available (thickness of divider = 4 mm).

Divider systems

As a standard, the divider system is mounted on every 2nd cover/chain link (HS).

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

Divider system TS0 without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	21.5	25	17.5	-

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	21.5	25	17.5	2

The dividers can be moved in the cross section.

Divider system TS3 with height separation consisting of plastic partitions

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	π _T min
A	38*/16.5**/12***	16/42*	8	2

* For aluminum partitions
 ** For VRO
 *** For version with height separation to the end divider

The dividers are fixed with the partitions. The entire divider system can be moved in the cross section.

Aluminum partitions in 1 mm increments with a_x > 42 mm are also available.

a _x (center distance of dividers) [mm]											
a _c (nominal width of inner chamber) [mm]											
16	18	23	28	32	33	38	43	48	58	64	68
8	10	15	20	24	25	30	35	40	50	56	60
78	80	88	96	112	128	144	160	176	192	208	
70	72	80	88	104	120	136	152	168	184	200	

When using plastic partitions with a_x > 112 mm, we recommend an additional center support with a twin divider (S_T = 5 mm). Twin dividers are also suitable for retrofitting in the partition system.

for cable carriers

The extensive range of accessories allow cable carriers to be ideally adapted to your specific application. With the accessories for the cable carriers, the cable routing can be assembled from standard components to form a complete cable carrier system. We can also supply a pre-assembled TOTALTRAX® complete system.

- » Support tray and guide channels made from steel and aluminum
- » Driver connection for optimum transfer of the cables and hoses to the consuming units
- » Support rollers for longer unsupported lengths
- » Support and guide elements for optimum gliding and rolling
- » RSC – rolling instead of gliding on particularly long travel lengths
- » Strain reliefs for optimum placement with dynamic use of cables
- » Steel band covers as continuous, cost-effective protection against chips and other external influences
- » Opening tools reduce assembly times and save costs

Support trays

An even surface is required for reliable unrolling of the unsupported cable carrier. If this is not already provided on site, a support tray has to be used. If required, we supply our cable carriers with a suitable support tray for your application. This ensures quiet movement of the lower run with reduced wear, reducing costs and design work.

All support trays are available in zinc plated sheet steel or stainless steel. The selection depends on the conditions of use. The simple design allows easy fixing and omits complex individual constructions. The standard lengths are 2000 mm / 3000 mm. Special lengths on request.

We will also be happy to manufacture support trays for types 5000 to 9000. Please contact us.

Order

Support trays

To order the support tray, we need the following information:

- Number of support trays
- Material
- Version of support tray (one part/two parts)
- Part length
- Total length of support tray
- Cable carrier type
- Height of support tray h_A
- Inner width of support tray b_1

Guide channels

Guide channels are important elements for the reliable functioning with long travel lengths. The upper run of the cable carrier slides on the lower run and on the sliding area of the guide channel behind the fixed point. Guide channels prevent the upper run from slipping off the lower

run, ensuring quiet running with low wear. For vertical applications such as elevators or storage and retrieval systems, a vertical channel provides optimum guiding.

Standard channel..... Page 820

Sheet steel guide channels

- Simple version with customized fixing options.
- Zinc plated sheet steel or stainless steel.
- Standard lengths.

Steel Guide System (TKSG)..... Page 830

Guide channels in the modular system

- Modular system with optimized design for long travel lengths.
- Zinc plated sheet steel or stainless steel.
- Easy installation.

Channel enclosure..... Page 835

Cover for guide channels

- Optimum protection against external influences.
- Easy access for inspection.
- Modular design.

Alu Guide System (TKAL)..... Seite 836

Aluminium guide channels in the modular system

- Modular system with many mounting options.
- Standard lengths and sets.
- Lightweight design for high speeds.

Technical data on p. 818

Easy Guide System (TKEG) Page 844

Guide channels for multifunctional use

- Flexible use in many areas of application.
- Made of zinc plated sheet steel or stainless steel.

Vertical Guide System (TKVG) Page 864

Guide channels for vertical hanging applications

- Ready-to-install channel system made of aluminum.
- Standardized module.
- Easy installation.
- For elevators, storage and retrieval systems and many other applications.

Assembly profiles Page 865

Assembly profiles for guide channels

- Assembly profiles with sloping sides can be used for all guide channels for fastening
- Lengths in 50 mm grid possible

One-sided arrangement – with lower driver connection and reverse bending radius (standard)

Calculating the channel length

Channel length L_{KA}

$$L_{KA} = L_S + U_B + L_1$$

Calculating the connection height

Connection height H

$$H = 3 h_G$$

Calculating the slide support length

slide support length L_{KA}'

$$L_{KA}' = L_S / 2$$

One-sided arrangement – high connection

Calculating the channel length

Channel length L_{KA}

$$L_{KA} = L_S + U_B + L_1$$

Connection height high connection

Connection height H

$$H = 2 \times KR + h_G$$

Calculating the slide support length

slide support length L_{KA}'

$$L_{KA}' = L_S / 2$$

TSUBAKI KABELSCHLEPP Technical Support

Increased wear on the cable carrier can occur in applications with a **high driver connection**. Please use our technical support at technik@kabelschlepp.de for the configuration of your application. We will be happy to help you.

Opposite arrangement – with lower driver connection and reverse bending radius (standard)

Calculating the channel length

Channel length L_{KA}

$$L_{KA} = L_S + 2 U_B + X$$

Calculating the connection height

Connection height H

$$H = 3 h_G$$

Calculating the slide support length

slide support length L_{KA}'

$$L_{KA}' = X - 2 L_1$$

Opposite arrangement – high connection

Calculating the channel length

Channel length L_{KA}

$$L_{KA} = L_S + 2 U_B + X$$

Connection height high connection

Connection height H

$$H = 2 \times KR + h_G$$

Calculating the slide support length

slide support length L_{KA}'

$$L_{KA}' = X - 2 L_1$$

i Depending on the chain size, the inner channel width is 4-6 mm larger than the width of the guided cable carrier. Depending on the travel length, the connection height of the cable carrier must be reduced. Please contact us! We will be happy to calculate the suitable guide channel for your application.

i The calculated channel and support lengths are rounded to a reasonable production or installation dimension of the section lengths. A possible travel reserve must be taken into account. Standard section lengths are specified for each channel design.

i For different distances between the fixed points and drivers in your application please contact us.

Sheet steel guide channels

- Simple version with customized fixing options.
- Zinc plated sheet steel or stainless steel.
- Standard lengths.

Zinc plated sheet steel /
stainless steel

Standard lengths 2000 / 3000 mm
Special lengths on request

Features

- Universal installation – the channel side walls do not require aligning as there are no single side walls
- Large support widths through sturdy U-design
- Optionally available as a corrosion resistant, sea water resistant version
- Easy fixing options:
 - standard angle brackets for screwing
 - welded on directly on site
 - different fixing variants

Individual solutions

We can also manufacture customized sheet steel guide channels for your application, taking into account virtually any request regarding customized shapes and fixing options.

Information on dimensions can be found from p. 822

TRAXLINE®

One-sided arrangement

For one-sided arrangement of the cable carrier, the cable carrier slides behind the fixed point on a continuous slide support with run-on bevels.

Closed design

One part channel closed at the bottom and one part slide support with run-on bevels.

Open design

One part channel closed at the bottom and divided slide support with run-on bevels.

Dirt and liquids can drop through without restrictions.

Opposite arrangement

For opposite arrangement, a slide support is also attached for bridging between the fixed point connections.

Closed design

One part channel closed at the bottom and one part slide support with run-on bevels.

Open design

One part channel closed at the bottom and divided slide support with run-on bevels.

Dirt and liquids can drop through without restrictions.

 A special slide support can be adhered to reduce sliding resistance and abrasion between cable carrier and support. We recommend the use of special slide supports for velocities > 0.5 m/s and for frequent move cycles.

The cable carrier outer width without attachments B_k is taken into account for calculating the inner width of guide channel b₁ and the overall width B_{KA}.

Standard fixing with angle brackets (standard)

The angle brackets are mounted at the joints, ensuring precise connection of the joint areas in addition to fixing the channel to the substructure.

- Optimum alignment of the joints
- Reduced installation times
- Minimum number of screw connections
- Reliable fixing, even under rough conditions

 The figure shows an open channel version

s [mm]	X1 [mm]	b ₂ [mm]
2	104	b ₁ + 54
3	106	b ₁ + 56

Calculating C-profile length

C-profile length L_p

$$L_p = b_1 + 106$$

C-profile length L_p rounded to 50 mm

Suitable perforated C-profiles can be found from page 865

 The sheet metal thickness "s" corresponds to the respective wall thickness "s" of the channel.

 As a standard, the angle brackets included with the delivery are installed on all joints as well as at both ends of a channel. If you require more angle brackets beyond this, please state this when ordering.

Fixing kit (optional)

The delivery scope of the standard channel does not include the optional joining clamp fixing kit.

Fixing kit

- 1 C-rail (length depends on b_1)
- 2 Hexagon socket screws
- 3 Slide nut

 The length of the C-rail depends on the channel width and is supplied in standard lengths. Please contact us if you require custom lengths.

Fixing with alignment flanges and floor fixing plate

The fixing tabs are mounted at the joints, ensuring precise connection of the joint areas in addition to fixing the channel to the substructure.

- Optimum alignment of the joints
- Minimum number of screw connections
- Reduced installation times
- Push-to-connect system

C-profile length L_P

C-profile length L_P
rounded to 50 mm

$$L_P = b_1 + 105$$

Fixing with floor fixing bracket

The floor fixing brackets are mounted at the joints, ensuring precise connection of the joint areas in addition to fixing the channel to the substructure.

- Easy alignment of the joints
- Minimized number of screw connections
- Reduced installation times

C-profile length L_P

C-profile length L_P
rounded to 50 mm

$$L_P = b_1 + 66$$

Fixing with lateral connecting flange

The unsupported connecting flanges are mounted at the joints, ensuring precise connection of the joint areas in addition to fixing the channel to the substructure.

- Unsupported joints without support (self supporting) through flange connections
- Reliable, secure connection even with extreme vibrations or in unsupported channel arrangements

Order

Standard channel

To order the standard channel, please provide the following information:

- Number of guide channels
- Total length of channel
- Slide support height h_1
- Material
- Slide support length L_{KA}
- Outer height of guide channel h_{KA}
- Version of guide channel
- Floor fixing
- inner width of guide channel b_1
- Part length
- Join connection

Guide channels in the modular system

- Modular system with optimized design for long travel lengths.
- Easy installation.
- Available in zinc plated sheet steel or stainless steel.

Zinc plated sheet steel /
stainless steel

Standard lengths 1000 / 2000 mm
Special lengths on request

Features

- Especially suitable for cranes and applications with long travel lengths
- Simple design for short installation times
- No accumulation of dirt through open construction
- Fast and easy installation thanks to pre-assembled sidebands and channel brackets
- Complete system for screw-fitting
- All components without welds

Fixing with channel brackets

The channel brackets are mounted at the joins, ensuring precise connection of the joins in addition to fixing the channel to the substructure.

- Optimum alignment of the joins
- Reduced installation times
- No welds
- Minimum number of screw connections
- Reliable fixing under rough conditions
- High stability

h_{KA} [mm]	$D1$ [mm]	s [mm]
123	11	2
175	11	2
208	11	2
257	11	2

 The sheet metal thickness "s" corresponds to the respective wall thickness "s" of the channel.

 As a standard, the channel brackets included with the delivery are installed on all joins as well as at both ends of a channel. If you require more channel brackets beyond this, please state this when ordering.

Calculating C-profile length

Suitable perforated C-profiles can be found from page 865

C-profile length L_P

$$L_P = B_{KA} + 50 \text{ mm}$$

C-profile length L_P rounded to 50 mm

Fixing material (optional)

The delivery scope of the Steel Guide System (TKSG) does not include the optional joining clamp fixing kit.

Fixing material

- 1 C-rail (length depends on b_1)
- 2 T-head bolt M10
- 3 Hex nut
- 4 Washer

Order

To order the Steel Guide System (TKSG), please provide the following information:

- Number of guide channels
- Total length of channel
- Support length L_{KA}
- Outer height of guide channel h_{KA}
- Inner width of guide channel b_1
- Material
- Support height h_1
- Delivery (unmounted/mounted)
- Fixing with or without C-profile

Cover for guide channels

Protection against external influences: Maintenance-friendly enclosure

- Easy inspection of the cable carrier.
- Openable at any position.
- Protection of the cable carrier system against external influences (coarse dirt, falling parts, snow, ice).
- Disassembly without screws.
- To open without tools.
- Secured against accidental closing in opening position.
- Can be used with any TSUBAKI KABELSCHLEPP channel system.
- Modular design.

Aluminium guide channels in the modular system

- Modular system with many mounting options.
- Standard lengths and sets.
- Lightweight design for high speeds.
- Slide and roller support made of high-quality plastic.

Channel side wall
Al alloy

Standard lengths 1000 / 2000 mm
Special lengths on request

Features

- Safe operation on long travel length
- Seawater resistant
- Twin channel connectors for parallel arrangement of several channels
- Standard- and Heavy-Duty-Version
- Variable fixation in standard stainless steel
- UMB mounting kit for assembly of the cable carrier

The Alu Guide System (TKAL) for long travel applications and high loads ensures secure guidance and smooth running of the energy chain in a gliding and rolling application.

The standardized channel profiles of 1000 / 2000 mm in length can be individually adjusted to the width of the chain. They can be quickly and easily be installed with the help of a mounting kit. Such UMB mounting kits are also available for attaching the fixed-point of the energy chain.

The optional damping band additionally reduces noise emission and guarantees an even quieter running of the chain.

TSUBAKI KABELSCHLEPP also offer the Alu Guide System (TKAL) together with the appropriate energy chain as well as with the ready-to-install TOTALTRAX® System including cables.

Assembly instruction

One-sided arrangement

For One-sided arrangement of the cable carrier, the cable carrier slides behind the fixed point on a slide support with run-on bevels.

Open design

Channel with and without supports incl. run-on bevels.

Dirt and water can drop through without restrictions.

Opposite arrangement

For opposite arrangement, a slide support with a minimum length of 500 mm is also attached for bridging between the fixed point connections.

Open design

Channel with and without supports incl. run-on bevels.

Dirt and water can drop through without restrictions.

Glide and roll support made of plastic

Glide support

- Simple and quick mounting by hooking in
- Slip-free hold in channel fastening groove
- 500 mm long, loadable up to 100 kg
- Compensation of linear expansion by tothing at the joints – continuous glide surface
- Optimized, rounded approach slope without bend

Roll support (TKAL 254/274)

- Simple and quick mounting by hooking in
- Slip-free hold in channel fastening groove
- 500 mm long, loadable up to 100 kg
- Compensation of linear expansion by tothing at the joints – continuous roll surface
- Minimal noise emission

Standard and heavy duty

The internal or external mounting kits made of stainless steel are mounted at the joints, ensuring precise connection of the joints in addition to fastening the channel to the substructure.

Flying joint

The internal and external mounting kits made of stainless steel are mounted with a spacing of 30-500 mm from the joints, ensuring fastening of the channel to the substructure. The mounting kit does not necessarily have to be mounted at the joints.

External mounting kit 1

The mounting brackets are mounted at the outside of the channel. The additional joint connectors ensure precise connection of the joints.

Internal mounting kit 2

The mounting brackets are mounted at the inside of the channel. The additional joint connectors ensure precise connection of the joints.

UMB mounting kit

The UMB mounting kit for fixed point ensures optimum fastening of the cable carrier in the channel and depends on the cable carrier type.

Holder set strain relief (optional)

The holders are mounted on the outside of the channel for fixed installation of cables.

Twin channel connector 3 (optional)

The twin channel connectors enable the parallel arrangement of several channels.

All pictures of the mounting kit are exemplary.

Order

To order the Alu Guide System, please provide the following information or the used cable carrier:

- Number of guide channels
- Total length of channel
- Support length L_{KA} '
- Type of fastening (internal/external)
- Delivery (unmounted/mounted)
- Support height h_1
- Fixing with C-profile
- Inner width of guide channel b_1

* More information can be found on page 865

Guide channels for multifunctional use

- Flexible use in many areas of application.
- Made of zinc plated sheet steel or stainless steel.
- Easy and fast horizontal or vertical arrangement.
- On its side laying installation possible.

Zinc plated sheet steel or stainless steel

Standard lengths 2000 mm
Special lengths on request

Features

- Space-saving design
- Installation possible horizontal or laying on its side
- Easy and fast assembly by only one fitter
- Saves additional cable channels through installation of permanent cables directly on the holder (securely behind the channel)
- System remains horizontally adjustable after installation
- Mounting holes for the cable carriers and cable ducts every 850 mm
- Brackets are installed with screws or weld studs
- No complex steel structure necessary
- Suitable for all I-beams and box beams
- The same mounting brackets for different trough sizes/chain types
- Can be installed "flying"
- Closed design
 - Guiding for suspended chains
 - Allows operation of the cable carrier laying on its side
 - Mechanical protection
 - Protection against lateral acceleration
 - Protection against the cable carrier "banging" during acceleration and deceleration

With magnets as mounting aids for easy positioning of the holder and placing of the fastenings such as drilled holes or welded studs.

Our engineers will be happy to help with your project planning – please contact us.

One-sided arrangement with central feed

For single-sided arrangement of the cable carrier with central feed, the cable carrier slides behind the fixed point on a continuous slide plate.

Closed design – standing without enclosure (Variant A)

One-part channel in version with open top and one-part slide plate.

Closed design – standing with enclosure (Variant B)

One-part channel in version with closed top (enclosure) and one-part slide plate.

 For central feed, permanent cables can be placed directly on the holder (securely behind the channel)

One-sided arrangement with end feed

For single-sided arrangement of the cable carrier with end feed, the cable carrier slides behind the fixed point on itself.

Closed design – standing without enclosure (Variant A)

One-part channel in version with open top and one-part slide plate.

Closed design – standing with enclosure (Variant B)

One-part channel in version with closed top (enclosure) and one-part slide plate.

Guide channels for vertical hanging applications

- Ready-to-install channel system made of aluminum.
- Standardized module.
- Easy installation.
- For elevators, storage and retrieval systems and many other applications.

Aluminum channel system for UNIFLEX *Advanced*

The ready-to-install channel system for vertical hanging applications from TSUBAKI KABELSCHLEPP is ideal for use in fast moving storage and retrieval systems with high lateral accelerations. Other typical fields of application are lifters, elevators, construction elevators, crane elevators or lifts. As a ready-to-connect complete system including driver, cables and strain reliefs, it is very easy to install. Standard parts result in short delivery times and a cost efficient solution. This allows energy and data to be transferred within one system reliably and without interruptions.

Features

- Standardized for UNIFLEX *Advanced* 1555
- Available from 75 mm inner width and 125 mm bending radius
- Other series and types on request
- Suitable for extremely long travel lengths
- Fixed point offset possible
- Fixed point connection alternatively left or right
- Cable outlet on the driver alternatively towards the front or rear
- Standard lengths of the aluminum profile. Custom lengths also possible on request
- Mounting distance of the channel brackets flexibly adaptable
- Optional C-rails for assembly
- Attachment parts in galvanized steel or stainless steel

Our engineers will be happy to help with project planning – please contact us

- Assembly profiles with sloping sides can be used for all guide channels for fastening
- Lengths in 50 mm grid possible

Condition Monitoring

Knowing what's (not) up

Trademarks are legally protected for TSUBAKI KABELSCHLEPP GmbH as a national or international registration in the following countries: tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

Safety devices for cranes and wear measurement for glide shoes

- » signal is usable for a fully-automatic emergency stop-system
- » direct measurement of the push-/pull-forces at the moving point
- » force limits freely programmable (lower limit, upper limit)
- » error indication if the limits are exceeded
- » outgoing signal PLC usable (full stop, slow down)
- » no speed limit
- » scheduled gliding shoe replacement
- » wear monitoring in real-time
- » wear forecast
- » sensor-free wear elements
- » without additional cables and power supplies inside the cable carrier
- » usable for all glide shoe chains

The installation conditions are difficult? In that case our service team will take care of the mounting or assists and advises you.

Measuring glide shoe wear in the channel

- » Determine and evaluate real-time values
- » Easy to retrofit with exchangeable glide shoes
- » Easy installation by clipping on the glide shoes and installation in the channel
- » No additional cables in the cable carrier
- » Direct connection to your control system without radio transmission
- » Uses standard components

Measuring shear/tensile forces on the standardized driver

- » Guiding without transverse forces:
 - protects the cable carrier
 - minimizes costs through reduced downtimes
 - reduces defects/malfunctions/damage
- » Integrated shear/tensile force monitoring
- » The compensation of the parallel error between the system and the cable carrier is ensured
- » Defined cable routing through two pre-assembled modules
- » Easy maintenance/disassembly, if necessary
- » Easy retrofitting on an opposite-arrangement system
- » Easy connection options
- » System reliability and availability

Automatic outdoor test facility

TSUBAKI KABELSCHLEPP stands for high quality and reliable solutions. Our outdoor test facility offers realistic test conditions to ensure compliance with the highest standards. Gliding and roller systems with travel lengths over 100 meters as well as high-speed applications are tested by our experts under the toughest conditions.

Floating Moving Device

Optimum transfer of cables

Trademarks are legally protected for TSUBAKI KABELSCHLEPP GmbH as a national or international registration in the following countries: tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

Floating Moving Device (TKFMD) – To compensate for lateral offset in cable carriers

A flexible driver connection is required to ensure guiding of the cable carrier without transverse forces in applications with increased lateral offset.

The connection has to ensure a relative movement between the connection of the cable carrier system and the system driver.

Features

- » **Tolerance compensation:**
 - Horizontal: max. +/- 30 mm,
 - vertical: max. +/- 20 mm
 - Inaccuracies in channel alignment/ manufacturing/assembly are compensated
- » **Continued cable routing**
No threading or passing through of the tail lengths required
- » **Wear**
 - Wear reduced to a minimum
 - Roller-guided system in connection with all Tsubaki Kabelschlepp guide channels
- » **Material**
Stainless steel/aluminum, or painted to customer specifications
- » **Easy installation**
The cable carrier system has two defined mounting assemblies for easy installation of cables and hoses
- » **Cable routing**
The protected continued cable routing in the Floating Moving Device corresponds to the inner height of the cable carrier
- » **Strain relief**
Easy access and assembly with LineFix clamps for strain relief
- » **Standard connection dimensions**
 - For horizontal and vertical connection including GO module (friction-optimized for low wear)

Relevant factors

- » Guiding without transverse forces:
 - protects the cable carrier
 - minimizes costs through reduced downtimes
 - reduces defects/malfunctions/damage
- » The compensation of the parallel error between the system and the cable carrier is ensured
- » Easy maintenance/disassembly, if necessary
- » Easy retrofitting on an opposite-arrangement system
- » Easy connection options
- » System reliability and availability

Suitable for:

Type	Inner width B _i [mm]
M0950	130 - 500
M1250	150 - 800
M1300	140 - 500*

* Additional inner widths on request.

Arrangements

Single-sided arrangement:

Opposite arrangement:

Support rollers

Ball-bearing rollers
for long service life

Trademarks are legally protected for TSUBAKI KABELSCHLEPP GmbH as a national or international registration in the following countries: tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

Support rollers "Basic"

Support rollers are designed to support the upper run of the cable carrier when the maximum unsupported length is exceeded.

KABELSCHLEPP® support rollers are available for the types LS/LSX 1050, S/SX 0650, S/SX 0950, S/SX 1250 and S/SX 1800.

- » Cost-effective support rollers in lightweight design
- » Long service life thanks to ball bearing rollers
- » Optimized installation width
- » Only to be used for two-band carriers

Dimension table for standard support rollers

RSC – Roller Supported Chain

Cable carriers on rollers for particularly long travel lengths

Trademarks are legally protected for TSUBAKI KABELSCHLEPP GmbH as a national or international registration in the following countries: tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

Rolling instead of gliding – the proven principle for reduced friction

Cable carriers on rollers are a secure and reliable solution wherever a gliding system cannot be installed due to very long travel lengths or strong friction. On the RSC, the upper run does not glide on the lower run but on rollers. The rollers are mounted in roller bearings on the side of the cable carriers and permit very long travel lengths, for which substantially less drive power is required. The tensile/push

forces are decreased by up to 90 percent compared to gliding arrangements. Available for the types M0950 and M1300.

Lower costs and shorter maintenance times

If rollers are worn out, they can easily be replaced during maintenance. This means that time-consuming and expensive replacement of the complete cable carrier is no longer necessary. Notches in the channel allow easy visual checks and the rollers are easy to access. That saves time during maintenance and repair work.

Quiet, low-vibration operation

The rollers run on the guide rail and do not knock against other rollers. Ball bearings and a plastic roller surface support quiet, smooth operation.

Easy maintenance – rollers can be replaced without having to replace the side bands

Cable carrier on rollers (RSC)

- » Suitable for all required travel lengths
- » 90 % lower tensile/push forces than with gliding arrangement and therefore significantly less drive power required
- » Quiet, low-vibration operation
- » Space-saving and cost-optimized through short loop overhang – minimum station length
- » Rollers do not knock against each other
- » Long service life – low maintenance
- » Easy access to the rollers
- » Minimized strain on cable carrier and cable carrier
- » Low push/tensile forces
- » High travel speeds and acceleration
- » High additional loads possible
- » Use of proven standard cable carriers
- » Cable carrier cannot rise up
- » Variable profile lengths, adapted to your connection points

Automatic outdoor test facility

TSUBAKI KABELSCHLEPP stands for high quality and reliable solutions. Our outdoor test facility offers realistic test conditions to ensure compliance with the highest standards. Gliding and roller systems with travel lengths over 100 meters as well as high-speed applications are tested by our experts under the toughest conditions.

Strain relief devices

For optimum placement
with dynamic use of cables

Trademarks are legally protected for TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Strain relief devices

KABELSCHLEPP® strain reliefs were developed especially for use in cable carriers. We offer the best solution for each of many different areas of application. The type of strain

relief to be selected depends on cable type, length of the cable carrier and installation position.

LineFix® clamps page 878

- » Optimized foot geometry for secure seating in the C-profile.
- » For one cable and two or three cables stacked.
- » For C-profiles with 11 mm slot width.

Strain relief combs page 882

- » Higher fixing force than single-sided strain relief comb.
- » Uniform force transmission in push and pull direction.

SZL strain reliefs page 884

- » Gentle on the cables through large contact area with the cables.
- » Simple mounting without tools.

Block clamps page 885

- » For strain relief of hoses.

Assembly profiles page 886

- » Assembly profiles for strain relief elements

Accessories

TRAXLINE®

- » For C-profiles with 11 mm slot width.
- » For one, two or three cables stacked.
- » Optimized foot geometry for secure seating in the C-profile.
- » High grade corrosion protection of the coated housing body through cathodic dip coating (CDC).
- » Pan design with support ribs for secure fixing of the cables.
- » Rounded design of the pan elements, gentle on the cables.
- » Also available in **stainless steel (ER 1S)**.

 The data for the total height are guide values.

The actual height depends on the cable diameter and the cable structure, among other things.

Pan design with optimized geometry.

The curved support ribs fix the cables very gently and reliably.

Secure seating and easy assembly

In practical operation, tensile forces occur in both cable directions. Clamps therefore have to transmit high tensile forces in the respective direction.

In contrast to standard commercial clamps, the LineFix® foot geometry ensures transmission of extremely high tensile forces equally in both directions. The catch fixes the foot securely in the C-profile when it is bolted on, preventing the crossbar from tipping out during load application, regardless of the direction of forces or installation.

Easy installation even in tight packaging spaces through headless screw with hexagon socket.

Observe minimum height

For cable carriers with upper run gliding on the lower run, the system height of the strain relief must not be higher than the chain link height!

 Recommended tightening torque:
max. 3 Nm for electric cables suitable for cable carriers

TRAXLINE® cables for cable carriers

Hi-flex electric cables which were especially developed, optimized and tested for use in cable carriers can be found at tsubaki-kabelschlepp.com/traxline

Maximum flexibility with combinable double jaws

The standard sets of LineFix® clamps in size LF/LFX 12 offer even more flexibility and mounting options due to the extension with the new double and counter jaws. Optimized for different cable diameters and individually combinable

heights, almost all requirements can be implemented without any problems.

For separate strain relief or fastening of cables outside of the cable carrier – suitable for all cable carriers.

The strain relief combs are equipped with teeth on both sides. This allows secure fixing of each cable with two cable ties.

- » Secure fixing with two or four cable ties
- » Higher fixing force than single-sided strain relief combs
- » Uniform force transmission in push and pull direction
- » Minimized movement of cables and hoses

TRAXLINE® cables for cable carriers

TSUBAKI KABELSCHLEPP – inventor of the cable carrier. The product portfolio comprises over 100,000 steel, hybrid systems and plastic variants. Always a suitable, reliable cable carrier, whether standard or individual complete solution. We are active for you worldwide. We use our more than 60 years of experience to continuously develop the "driving force" – the TRAXLINE® cables – and adapt them to the requirements of the market.

Our cable series meet the highest quality standards to ensure the availability of your systems.

Our TRAXLINE® cables are continuous bending hi-flex and very durable. Tested functional reliability which meets applicable standards and guidelines is an essential criterion.

Competent, target-oriented system consultation and global on-site service are our constant commitment to the technical and economical optimization of your applications.

Product range

The TRAXLINE® range is continuously being optimized and expanded, especially for the ever increasing requirements of use in cable carriers. A clearly structured type selection provides a unique combination of performance characteristics and usage possibilities.

- » Highest quality requirements
- » Continuous bending hi-flex, very durable
- » Complies with applicable standards and guidelines
- » 2D applications (unsupported and gliding)
- » For all environments from cleanroom applications to tough ambient conditions in a rough operating environment

Service & support

- » Competent, target-oriented system consultation and global on-site service
- » Fast availability through stockkeeping of more than 500 cable types
- » No minimum purchase quantity
- » Special designs for projects

TSUBAKI KABELSCHLEPP cable warehouse

Over 500 cable types, constantly available from the warehouse, ensure fast availability around the globe. We deliver from stock and without minimum purchase quantity.

Efficient design engineering Precise and fast

Decrease your engineering times, accelerate your design processes, configure with original data directly from the manufacturer.

We are continuously investing in providing product-related data online to make your work easier. This allows you to access current product and CAD data already during the design engineering phase.

We are currently offering comprehensive technical information materials in three online tools which are partially interlinked.

Our web-based Online-Engineer platform with worldwide online access provides a variety of functions to support you with the selection and configuration of products for your application. All necessary technical and calculation information for the individual products from the areas of cable carriers, cables and other accessories are provided on a central, clearly structured platform. Selection of the suitable products is made substantially easier by entering different parameters.

For even more efficient use, the data portals of Online-Engineer and CADENAS are linked. This allows you to quickly and easily download the suitable CAD model for your product configuration without having to exit Online-Engineer.

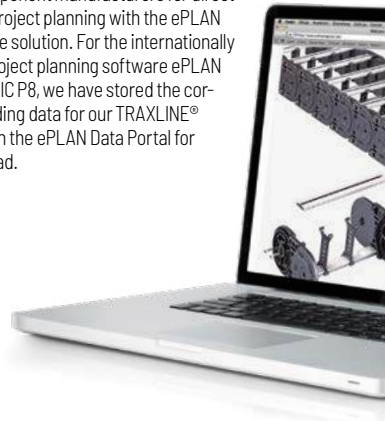

CADENAS 3D CAD catalog

CADENAS is an internationally used platform for providing 3D component models in a variety of CAD formats. It includes a large number of renowned companies from mechanical engineering, plant engineering and other industry sectors. We are currently offering CAD models in all standard CAD formats for the entire product portfolio. The database also contains the corresponding models for guide channels and support trays. The catalog is continuously expanded and supplemented.

Electrical engineering with ePLAN

The ePLAN Data Portal is an integrated, web-based data platform for providing current device data of market-leading component manufacturers for direct use in project planning with the ePLAN software solution. For the internationally used project planning software ePLAN ELECTRIC P8, we have stored the corresponding data for our TRAXLINE® cables in the ePLAN Data Portal for download.

System competence

TOTALTRAX® complete systems

As a specialist for cable carriers and drag chain cables of all kinds, we have been a reliable partner for many decades also when it comes to turnkey complete systems.

Thousands of systems implemented by us are in use worldwide, each individually adapted to the customer application. Whether single harnessed cable carrier or highly complex system – we offer ready-to-install assemblies for almost any area of application.

As a member of the TSUBAKI group, we are part of a globally operating group of companies. This allows us to offer our customers and partners the international presence of a global player combined with the flexibility and creativity of a medium-size enterprise.

The following applies to all systems:

- » Manufactured from high-quality components
- » Perfectly adapted components
- » Optimized turnaround times
- » "Just-in-time" deliveries
- » Complete systems from simple to complex

We take care of everything – and you can relax

Our system experts work with you to develop the technical solution as a reliable assembly for your product.

This also includes the correct selection of the individual parts and the procurement of purchase parts: smooth

interaction of all components is essential for a permanently functioning system.

The result: a customized complete system consisting of up to several hundred individual components.

We support you with:

- » Extensive consulting during planning
- » Support for project planning
- » Preparation of an individual cable plan
- » Engineering for precision-fit interfaces
- » Customized system as per customer requirements
- » Procurement of all components
- » Professional support during the entire project
- » Only one contact – continuously from the first project planning meetings until installation

Our complete systems – delivered assembled and ready

Optimized manufacturing processes and coordinated provision of the correct components guarantee fast turn-around times and save you time and money, no matter how simple or complex your system is.

For large batches we can set up customer-specific production lines on request. We configure and manufacture economically viable individual solutions from a batch size of just one.

High-quality individual components make our complete systems reliable, resistant and durable. Regular checks

additionally ensure consistently high quality. We even confirm this in writing:

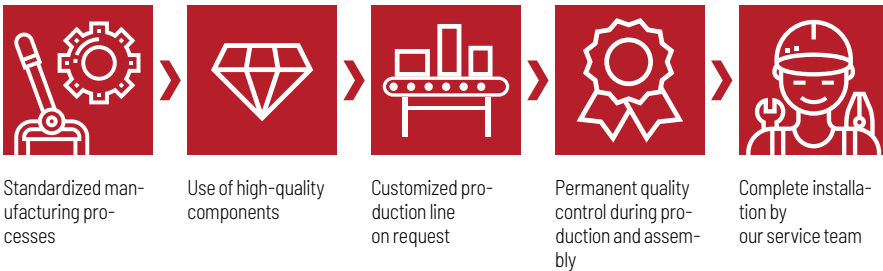

- » for individual components and
- » for ready-mounted assemblies – on request with certificate and comprehensive project documentation

We deliver the cable carrier “just in time” and ready for installation, to your production facility or to the desired installation site. Safely transported in single-use or returnable packaging.

Difficult installation situation?
Our service team can take on the installation or support your with their expertise.

The optimized process:

Your benefits at a glance

- Obtain your complete system from one source: that makes procurement easier while also saving time and money.
- » Complete delivery from one responsibility
 - » One contact for the complete system
 - » No storage costs
 - » Reduced procurement costs by concentrating on one partner
 - » Reduced effort for goods incoming inspections
 - » Timely delivery directly to your production facility
 - » Shorter downtimes through plug & play installation

MT series
XLT series
ROBOTRAX® System
FLATVEYOR®

General abbreviations

- a₁** = Hole distance – side edge
- a₂ / a₃** = Hole distance – outer edge
- a_c** = Nominal width inner chamber
- a_{max}** = Max. travel acceleration
- a_T** = Distance lateral tabs inside to center of first divider
- a_x** = Divider center to center distance
- b₁** = Inner width of support tray/guide channel
- b₂** = Hole distance – channel fixation outside
- b₃** = Hole distance – channel fixation inside
- b₄** = Support width of the support tray
- b_A** = Distance between connection boreholes
- B_A** = Outer width of support tray
- B_E** = Contact width of roller
- B_{EF}** = Overall width of cable carrier incl. attachments
- B_G** = Total width of support
- B_i** = Inner width
- B_k** = Outer width of cable carrier without attachments
- B_{KA}** = Outer width of guide channel
- B_P** = Width of base plate
- B_R** = Width of roller
- B_{St}** = Stay width
- c** = Distance between hole stay bores
- d** = Cable diameter
- D** = Bore diameter
- D_R** = Diameter of support roller
- d_R** = Pipe diameter
- D_S** = Diameter of wheel flange
- G** = Bore hole position
- H** = Connection height
- H_A** = Axle height of support roller
- h_A** = Outer height of support tray
- h_G** = Chain link height
- h_{G'}** = Chain link height incl. glide shoe/roll
- h_i** = Inner height
- H_i** = Inner height of frame stay assembly
- h_{KA}** = Outer height of guide channel
- h₁** = Channel profile height – support height
- h₂** = Channel profile height – run-off height
- HS** = Half-stayed
- H_{SR}** = Height of the support roller
- H_z** = Installation height
- l** = Height channel opening
- K** = Chamber
- K_R** = Bending radius
- l₁** = Connection length
- l₂₋₅** = Connection dimensions
- l_A** = Length of end connector
- l_A** = Length of support tray
- l_B** = Length of carrier in bend
- l_D** = Length of permissible sag
- l_{EF}** = Overall length of cable carrier incl. attachments
- l_f** = Unsupported length
- l_k** = Cable carrier length without connection
- l_{KA}** = Channel length
- l_{KA'}** = Support length
- l_L** = Cable length
- l_{LFE}** = Cable overhang fixed end
- l_{LME}** = Cable overhang moving end
- l_P** = Length of profile
- l_S** = Travel length
- l_y** = Fixed point offset
- n_{RKR}** = Number of RKR links
- n_T** = Number of dividers
- n_z** = Number of comb teeth for strain relief
- q_k** = Intrinsic cable carrier weight
- q_z** = Additional load
- RKR** = Reverse bending radius
- s / s₁** = Sheet metal thickness
- S_H** = Thickness of height separation
- S_T** = Thickness of divider
- t** = Pitch
- T** = Slide support width of guide channel
- U_B** = Loop overhang
- VD** = Position of continuous height separations in divider
- VR** = Position of partial height separations in divider
- v_{max}** = Max. travel speed
- VS** = Fully-stayed
- W_f** = Base width of divider
- X** = Connection distance for opposite arrangement
- z** = Pretension

Cable carrier | Key for abbreviations | Pictographs

Definitions

driver view = view into the driver connection

Pictographs

	Inner height		Stay arrangement on every 2 nd chain link		Clean room suitable
	Outer height		Stay arrangement on every chain link		Quiet running/low noise
	Inner width		Cannot be opened		Sold by the meter
	Outer width		Opens outward		Low weight
	Inner width (B) in x mm increments		Opens inward		Roller chain
	Pitch		Opens inward/outward		ESD material
	Bending radius		Swiveling/pressing in outward		Ex-protection-material
	Long travel length		Swiveling/pressing in inward		Heat-resistant
	Travel length unsupported		Covered cable carrier		Cold-resistant
	Travel length gliding		Sliding dividers		Resistant to hot chips
	High additional load		Fixable dividers		Flame-resistant V0 (UL94)
	High travel acceleration		Fixable dividers in x mm grid		Flame-resistant V2 (UL94)
	High travel velocity		Height separation possible		suitable for railroad applications
	Guide channel required		Height separation in 1 mm increments		Order code
	Strain relief		Hole stay available		Important information
